

**A brief tribute to Vit Klemeš  
from the IAHS/STAHY Workshop – Advances in Statistical Hydrology  
(Taormina, Sicily, Italy, 23-25 May, 2010)**

I wish to say a few words about Vit Klemeš as an admirer of his who had the good fortune to meet him in person and the honour to exchange ideas and thoughts with him in the last few years.

My relationship with Vit started in 2003 with his caustic letter complaining about my misquotation of his “Hurst” paper. His paper was attached to the letter with some annotations, including a dedication “to Dr. Koutsoyiannis without compliments”.

So, the first thing I remember about Vit is his frank, unfeigned, clear-cut – and thus friendly – writing, also suggestive of the importance of scientific disagreement and discussion.

Vit’s sweet personality, noble soul and kind manner on the one hand, and his profound scientific knowledge and powerful reasoning on the other, made disagreeing with him a fascinating and entertaining experience, a lesson in the importance of understanding the other’s position, and a demonstration of the power and usefulness of dialogue in scientific affairs.

Vit’s involvement in science went far beyond hydrology. He had an informed opinion about broad scientific and philosophical issues. He even wrote an essay about the Special Relativity theory, entitled “Asymmetric Aging or Asymmetric Reasoning?”, as well as a note on the formation and historical evolution of cart tracks.

In addition to being a scientist and engineer, Vit was a conscious and active citizen of the world, having strong positions on all contemporary political, economic and even religious affairs and problems. His recent book, entitled “An Imperfect Fit: Advanced Democracy and Human Nature”, is one of the testimonies of his activity of this type.

Vit Klemeš was, thus, an unusual and unorthodox personality resembling more an ancient philosopher than a specialized modern scientist. Some of his works were recently published collectively in a book with the manifest title “Common Sense and Other Heresies”.

We hydrologists will certainly remember him as we keep reading his monumental papers. I wish that we also try to follow his approach to use common sense, to dare be heretic, and to mimic his caustic and humourist attitude.
