**Abstract.** This supplement provides material supporting the analyses and conclusions of the main paper and comprises four sections:

- S1. On the human teeth problem and the debate of Russell and Aristotle
- S2. Modern imaginative explanations of the Nile floods
- S3. The appearance of the term hydrology
- S4. Original texts of the quotations translated in the article to English

## **S1. On the human teeth problem and the debate of Russell and Aristotle**

The problem of the number of humans' teeth and the "debate" of Russell and Aristotle has some merit to examine from an epistemological viewpoint. A relevant question is this. What is actually the number of humans' teeth:

- a constant for all individuals (irrespective of sex)?
- varying among individuals?
- varying among individuals and also varying in time for each individual (like in a stochastic process)?

Modern official statistical data of the USA (Dye et al., 2007) confirm that male humans have a slightly higher number of teeth than females ( $25.1 \pm 0.11$  and  $23.86 \pm 0.14$  respectively in the period 1988-1994, while both numbers increased by about 1 in 1999-2004; notice in both sexes the number is considerably smaller than 32). A first reason for the difference is that the number of teeth decreases with increasing age, and women's life expectancy is longer by several years than men's. A second reason is that women's teeth seem to be more fragile than men's; specifically, official USA statistical data (Harvey, 1981) suggest that the average number of decayed, missing, and filled permanent teeth per person, among adults of 35-74 years of age, was 18.5 and 19.7 for males and females, respectively, in 1960-62 and increased by about one in both sexes in 1971-74. A third reason of sex disparities is the fact that molar agenesis (congenital lack of one or more teeth; Sujon et al., 2016) is lower in males (38.6%) than in females (40.1%). A fourth reason is that hyperdontia (additional teeth in relation to the normal dental formula, which according to observations ranged from 1 to 8) is more common in males (Harris and Clark, 2008).

The gap between the life duration of women and men is currently about 5 years (75.20 for women, 70.41 on a global basis<sup>1</sup>). While life expectancy varies across countries within the range 51 to 88 years, the gap between the two sexes is almost constant, at about 5 years. We can speculate that, because of the more frequent wars in the times of Aristotle, this gap would be greater and, given that the number of teeth is a decreasing function of age, the difference would be greater and Aristotle's observation would be correct. Fragility might also have played a bigger role in ancient times as the dentistry was not as developed as today.

## S2. Modern imaginative explanations of the Nile floods

Johann Michael Vansleb (or Vanslebius or Father Vansleb; 1635 – 1679; a German theologian and linguist) who travelled in Egypt in 1672–73 published a book about Egypt in 1677 in French and a year later in English (Vansleb, 1678). Among other things, he provides an imaginative explanation for the Nile floods. He contends that yearly the Nile's level “begins to increase and decrease on a certain day precisely”, namely on 17 June and on 24 September, respectively. He reports some mysterious “drops” that synchronize with the beginning of the inundation, that is “a kind of a Dew which falls towards the last quarter of the night, near the morning”, while the rainfall in Ethiopia starts later, in July. Therefore, he asserts that:

*The increase of the River proceeds from several causes; the first and the chief is, the fermentation caused in it by this Dew*

while he includes in the causes, with secondary role, the rainfall in Ethiopia and the westerly winds, which:

*blow strait into the River Nilus and hinder the fresh water from coming out, so that it returns back, and causeth the River to swell.*<sup>2</sup>

Interestingly, even before Vansleb's trip and book, the French physician and philosopher Marin Cureau de la Chambre (1594 – 1669) published a book citing other travellers to Egypt (e.g., the Venetian physician and botanist Prospero Alpini or Prosper Alpinus; 1553 – 1617), in which he adopts the cause of floods by this mysterious dew, but also introduces the *nitre*<sup>3</sup> “theory” (de la Chambre, 1665). His book was also presented in Britain with a summary published in the Philosophical Transactions (Oxford), from which we quote the following (Anonymous, 1665–1666b):

A DISCOURSE ABOUT THE CAUSES OF THE INUNDATION OF THE NILE, in French. *The Author of this Book is Monsieur dela Chambre, who being perswaded from several Circumstances, that accompany the Overflowing of this River, that it cannot proceed from Rain, ventures to assign for a Cause of it, and of all the other effects that happen at the time of its swelling, the Niter, wherewith that water abounds.*

[...] 'Tis affirm'd, that 3 or 4 days before that River begins to overflow, all its water is troubled: that then there falls a certain Dew, which hath a fermenting vertue, and leavens a Paste exposed to the Air. [...] the Niter, which the Nile is stored with, is the cause of all these strange effects [inundation], and of many others, by him alledged. For, saith he, when the Nitre is heated by the heat of the Sun, it ferments, and mingling with the water, troubles it, and swells it, and makes it pass beyond its banks; after the same manner, as the Spirits in new Wine render it troubled, and make it boyle in the vessel.

[...] the Author undertakes to prove, that all those strange effects cannot be attributed to Rain or Snow, and that the overflowing of the Nile always happens at certain day.

It appears that the dew and nitre “theories” had subsequently become popular in Oxford. Thus, Charles Leigh (English physician and naturalist 1662–1701?) in a letter published in Philosophical Transactions (Leigh, 1684), which was addressed to Robert Plot (“Professor of Chymistry in the University of Oxford” and “Director of Experiments to the Philosophical Society of Oxford, and one of the Secretaries of the Royal Society”; 1640 – 1696), writes:

*By Monsieur de la Chambre, it is affirmed that three or four days before the Nile begins to overflow, there falls a certain dew which hath a fermenting vertue, and leavens a paste expos'd to the air, and at that time saith Pliny, and Monsieur de la Chambre the Nitre Pits grow full of Nitre. And Sands, Vanslebius and several say, that tho 500 in a day die in Grand Cairo of the Plague before the beginning of the inundation of Nile, yet the very day after there does not one die, which doubtless could not proceed from any other reason, then because at that time, the air was impregnated with this Volatile Alkaly, for at that time the Nitre Pits grow full and this dew falls; (this I think) may sufficiently hint to us the great use of its volatile spirit especially in pestilential distempers.*

<sup>2</sup> In all quotations we have kept the spelling of the original, which may differ from the common current one.

<sup>3</sup> Also spelled *niter* in some English books.

Subsequently this view was adopted by Plot himself, who wrote (Plot, 1686):

*The Origine of [the] increase [of Nile's level] the learned Vanslebius (who lived there some years and carefully observed it) thinks chiefly to proceed from the fall of certain drops, somewhat like dew, that mixing with the waters cause such a fermentation and corruption in them that they expand themselves and swell to a great height, long before it can any way be possibly effected by the great rains in Habessia [= Abyssinia, Ethiopia].*

He further proceeded to contend:

*The learned Cambraeus as cited by Gassendus [Petrus Gassendi; 1592 –1655] thinks this fermentation to be caused by Niter, wherewith the Country and especially the Channel of the River is acknowledged to abound, which being heated by the Sun, thus dilates it self and makes the River to swell.*

From a systematic search in Philosophical Transactions, it turns out that there was at least one scholar who opposed those “theories”: the Dutch manuscript collector Isaacus Vossius (Isaac Voss; 1618 –1689). His book written in Latin (Vossius, 1666) was also presented in the Transactions (Anonymous, 1665–1666a,c). From the latter presentation we quote this:

*[Vossius] easily gives an account, why the Nile yearly overflows about the end of June: For, as at that time there falls much rain in Æthiopia, it must needs be, that the Nile, whose source is in that Country, should then overflow, when those rains begin, and subside, when they cease.*

Interestingly, Vossius’s (1666) view is not far from Aristotle’s and he quotes Greek authors to support it, namely, Cleomedes, Nonnosus and Cosmas Indicopleustes (see main paper).

However, Vossius’s view remained unpopular. According to Garnier (1892), during the 18<sup>th</sup> century:

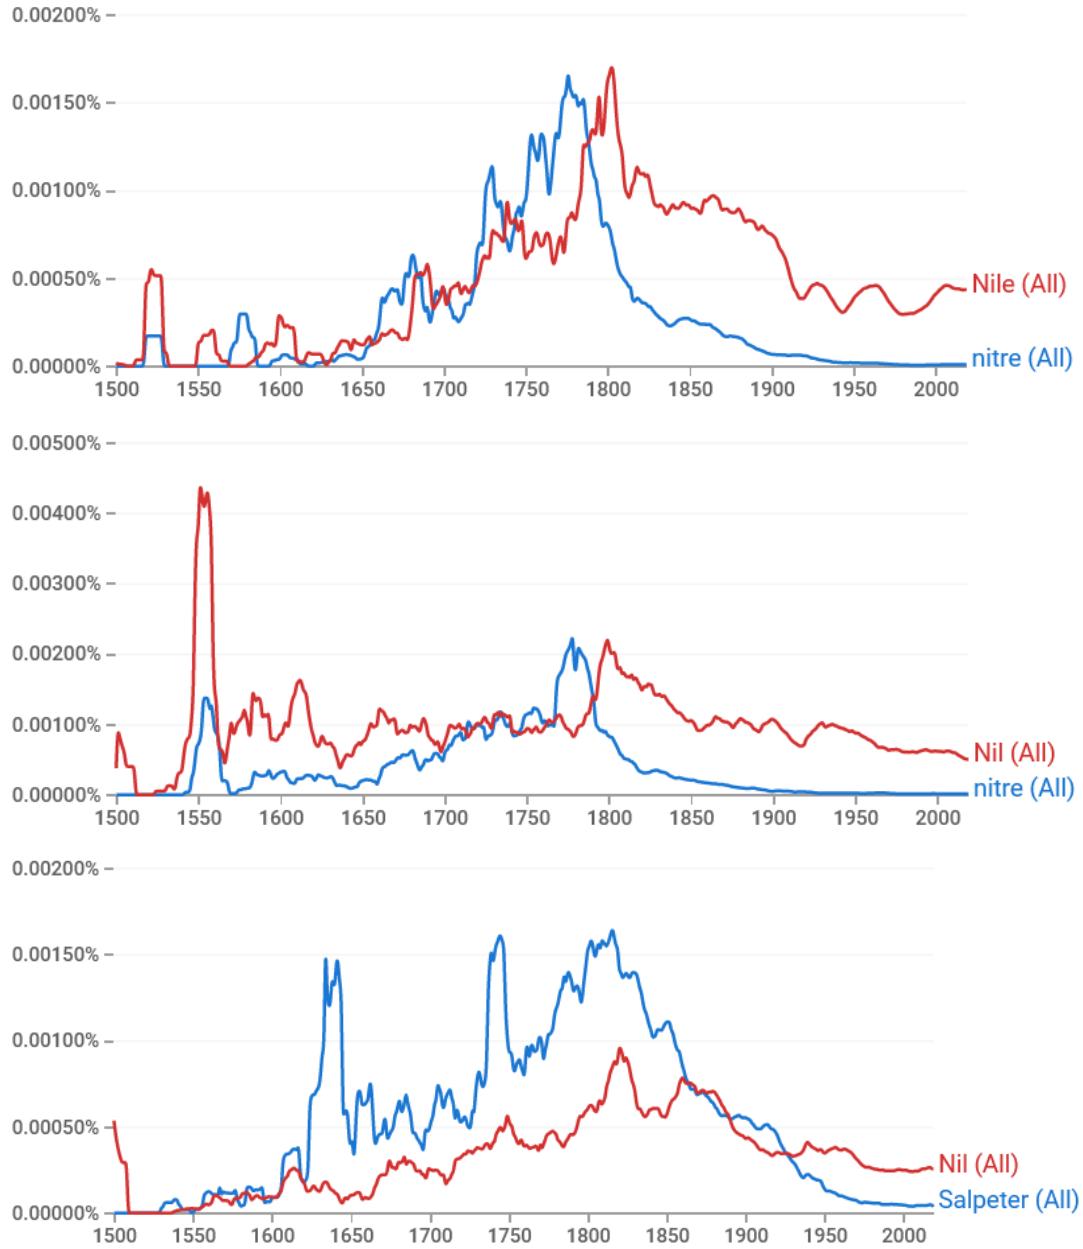

*The learned societies of France, England, and Germany recognised the nitrous salt in the fertilising essence of Nile water, dung, snow, rain water, and other real or imaginary manures; and the whole scientific world extolled in extravagant terms the virtues of a compound the true nature of which it had as yet failed to grasp.*

This is reflected in the popularity of the use of the word *nitre* in books written in the languages of these three countries. As shown in Figure S1 this name is not in use any more, but in the 18<sup>th</sup> century its use had peaked, exceeding those of the word *Nile*.

Complete dismissal of these imaginative “theories” would require additional modern evidence and thus it had to wait a century, up to the end of the 18<sup>th</sup> century. Then, James Bruce (1730 –1794), a Scottish traveller and travel writer who visited North Africa and Ethiopia, including the origins of the Blue Nile, wrote with a modest tone of irony (Bruce, 1813):

*I shall now mention a treatise of a modern philosopher, wrote expressly upon this subject; I mean a discourse on the causes of the inundation of the Nile, by M. de la Chambre, printed at Paris in quarto, 1665, where, in a long dedication, he modestly assures the king, he is persuaded that his majesty will consider, as one of the glories of his reign, the discovery of the true cause of the Nile's inundation, which he had then made, after it had baffled the inquiry of all philosophers for the space of 2000 years; and, indeed, the cause and the discovery would have been both very remarkable, had they been attended with the least degree of possibility. [...] M. de la Chambre says, that the nitre, with which the ground in Egypt is impregnated, ferments like a kind of paste, occasioning the Nile to ferment likewise, and thus increases the mass of water so much, that it spreads over the whole land of Egypt.*

*Far be it from me to bear hard upon those attempts with which the ancients endeavoured to solve those phaenomena, when, for want of a sufficient progress in experimental philosophy and observation, they were generally destitute of the proper means; but there is no excuse for a man's either believing or writing, that earth, impregnated with so small a quantity of any mixture as not to be discernible to the eye, smell, or taste, could periodically swell the waters of a river, then almost dry, to such an immensity, as to cover the whole plains of Egypt, and discharge millions of tons every day into the sea.*

**Figure S1:** Frequency of appearance of the indicated words in books hosted in the Google books platform (<https://books.google.com/ngrams/>) in three languages: (upper) English; (middle) French; (lower) German.

### S3. The appearance of the term *hydrology*

Several terms related to hydrology appear in Ancient Greek literature, which are etymologized from the noun *ὕδωρ* (*hydor*, water). Specifically:

- The conveyance of water or liquids is termed *ὑδραγωγία* (ἱ), and a person (or device) related to it *ὑδραγωγός*.
- The actions of drawing, fetching or distributing water are termed *ὑδρεία*, *ὑδρευσις* and *ὑδροπαροχία*; a person related to them is termed *ὑδροπάροχος* and a guard or inspector of aqueducts or irrigation works *ὑδροφύλαξ*.

- The action or art of seeking or discovering water is termed *ὑδροσκοπία*, *ὑδροσκοπική* or *ὑδροφαντική* (verb: *ὑδροσκοπέω*); a person related to it is *ὑδρόσκοπος*, *ὑδρογνάμων* or *ὑδροφάντης* and a related instrument is *ὑδροσκόπιον*.

These, however, have not been transplanted to the international scientific or technological vocabulary, where words of Latin origin (e.g. aqueduct) dominated. On the other hand, the following Greek terms have become global:

- The modern term *ὑδραυλική* (*hydraulics*) stems from *ὑδραυλικὸν ὄργανον* (*hydraulic organon*), first used by Hero for a musical instrument operated by hydraulics. Earlier, Ctesibius (Κτησίβιος; fl. 285–222 BC) invented the instrument called *ὑδραύλις* (ἡ) (*hydraulis*), which is played by a musician called *ὑδραύλης* (*hydraules*). Its etymology stems from *ὕδωρ* (water) and *αὐλός* (*aulos*; pipe, flute, clarinet). Thus, the term *hydraulics* was not introduced by Robert Boyle (1627–1691), as commonly written (Biswas, 1970, p. 225), but almost two millennia earlier.
- The term *meteorology* stems from *μετεωρολογία*, which in turn stems from *μετέωρα* (*meteors*; note, in the ancient literature, in addition to hydrometeors, meteors include the heavenly bodies); a person who studies *μετεωρολογία* is *μετεωρολόγος* (*meteorologos*, meteorologist) or *μετεωρολογικός* (*meteorologicos*, meteorologic) (cf. Plato's *Phaedo* 270a and Aristotle's *Meteorologica*).
- The term *climate* stems from *κλίμα* (meaning the inclination angle of the incoming sunbeams; pl. *κλίματα*); a property pertaining to *κλίμα* is *κλιματικός* (Koutsoyiannis, 2021).

*Hydrology* is also a Greek word, i.e., *ὑδρολογία* (feminine noun transliterated in Latin as *hydrologia*), but it does not appear in the Ancient Greek literature.<sup>4</sup> The closest match it contains is *ὑδρολόγιον* (*hydrologion*, a noun in the neuter gender), which however is a water-clock. Its plural, *ὑδρολόγια*, is transliterated in Latin as hydrologia, precisely the same as the transliteration of *ὑδρολογία* (notice that in Greek there is a difference in the accented syllable). Among the first books published after the invention by Gutenberg of mechanical printing press, was the Lexicon of Festus (in Latin), typically dated to the 2nd century, with original title *De Verborum Significatione* (On the Meaning of Words). This does not contain the term *hydrologia*, but commentaries on it published several years after do. Thus, this term appears in the book of Commentaries on *de Verborum Significatione* by three famous interpreters (Alciatus, Brechaeus, Fornerius, 1589, p. 10) but from the context it becomes clear that it is plural of *hydrologion* (or *hydrogium* in Latin). It also appears with the same meaning in an encyclopaedic collection of mathematical curiosities by Bettinus (1642).

According to our own search in digital archives of old books, the first book containing the term *hydrology* in its French version, *hydrologie*, is that by Landrey (1614). Other books whose title (or subtitle) contains the term hydrology, published in the 17<sup>th</sup> through 19<sup>th</sup> century, are listed in Table S1 and illustrated in Figure S2 to Figure S13. It appears that the main orientation of those books was medical. At the end of the 19<sup>th</sup> century an international congress of hydrology and climatology was held at Biarritz, France (in Bay of Biscay close to the Spanish borders) as reported by Symons (1887), in which a distinction was made between *medical hydrology* and *scientific hydrology*. The key persons of that congress, shown in Figure S14, appear to be mostly medical doctors. For most of them we found their details which are as follows:

- Maxime Durand-Fardel (1815–1899), French medical doctor and explorer; coauthor (with Eugène Le Bret and Jules Lefort) of *Dictionnaire Général des Eaux Minérales et d'Hydrologie Médicale*, 4 vol., 1860.<sup>5</sup>
- Joseph Louis Félix Garrigou (1835–1920), French medical doctor and prehistorian; chair of medical hydrology at Toulouse (1891).<sup>6</sup>
- Antoine Thomson d'Abbadie d'Arrast (1810–1897), Irish-born French explorer, geographer, ethnologist, linguist and astronomer.<sup>7</sup>

<sup>4</sup> Indeed, *The Liddell, Scott, Jones Ancient Greek Lexicon* (LSJ; the best-known Ancient Greek dictionary; <https://lsj.gr>) does not contain the entry *ὑδρολογία*.

<sup>5</sup> [https://fr.wikipedia.org/wiki/Maxime\\_Durand-Fardel](https://fr.wikipedia.org/wiki/Maxime_Durand-Fardel).

<sup>6</sup> [https://en.wikipedia.org/wiki/F%C3%A9lix\\_Garrigou](https://en.wikipedia.org/wiki/F%C3%A9lix_Garrigou).

<sup>7</sup> [https://en.wikipedia.org/wiki/Antoine\\_Thomson\\_d%27Abbadie](https://en.wikipedia.org/wiki/Antoine_Thomson_d%27Abbadie).

- Luigi Chiminelli (1816-1901), Italian medical doctor, specialized in medical hydrology; founder of the periodical *L'Idrologia Medica* (1879), later renamed *L'Idrologia e la Climatologia Medica* (1881).<sup>8</sup>
- Enoch Heinrich Kisch (1841-1918) Austrian medical doctor, balneologist and gynecologist born in Prague; author of *Allgemeine Balneologische Zeitung VI, Book 2: Monatsschrift Für Balneologie, Hydrologie Und Klimatologie* (1867).<sup>9</sup>
- George James Symons (1838-1900), British meteorologist; founder and manager of the British Rainfall Organisation, and a dense and widely distributed network of raingauges throughout the British Isles.<sup>10</sup>

**Table S1.** Books published in the 17<sup>th</sup> to 19<sup>th</sup> century whose title (or subtitle) contains the term hydrology (or the equivalent term in another language).

No.	Author (year)	Title	Language	Scope*	Illustration

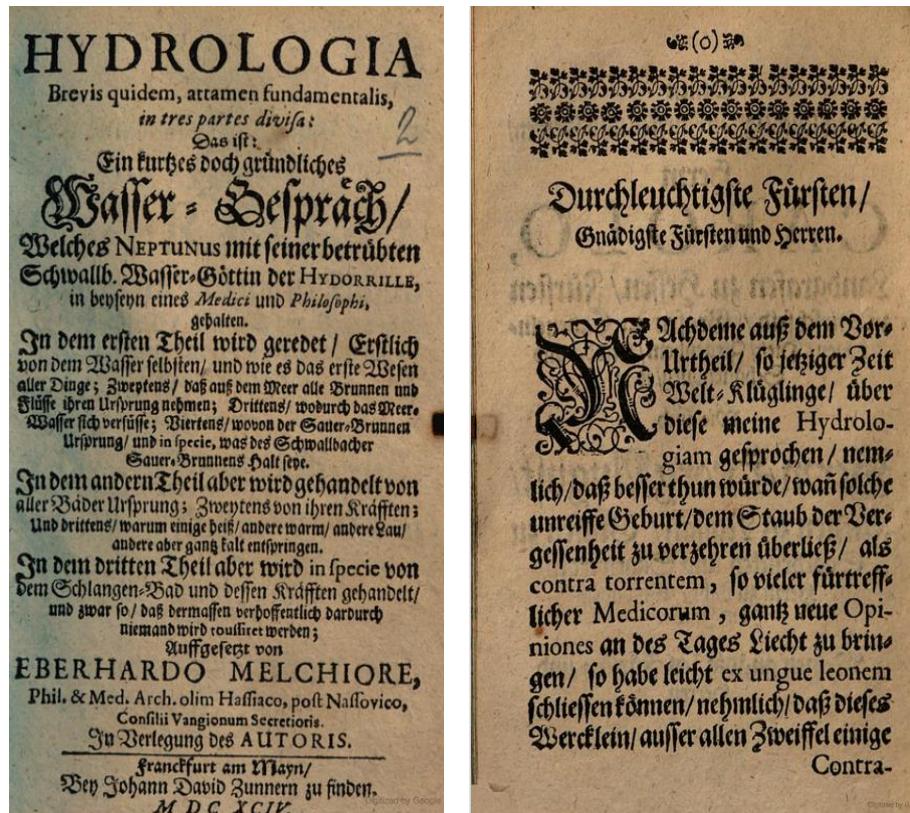

**Figure S2:** Title page and first two pages of the book *Hydrologie ou Discours de l'Eau* by Jehan (Jean) Landrey (a French King's doctor) (Landrey, 1614). From the title page it becomes clear that the book is about the virtue and power of medicinal waters (*la vertu & puissance des eaux médicinales*). In the first pages the author declares that he follows the doctrine of the philosopher to begin with the genus and proceed to the species, while he quotes Pindar's verse *ὕδωρ ἀριστόν* (*l'eau tres bone; water is best*; the exact quotation is *ἀριστὸν μὲν ὕδωρ*, Pindar, Olympian Odes, 1).

**Figure S3:** Title page and first page of the book *Hydrologiae Peripateticae Disputationes de Maris Tranquillitate* by Fortunio Liceti (1577–1657, an Italian physician and philosopher) (Licetus, 1655). The adjective *Peripatetica* in the book title shows the influence of Aristotle (whose School was named Περιπατητική Σχολή) on Liceti. The title page summarizes the content of the book (origin of the rivers from the mountains, meteorology, Dead Sea/Lacus Asphaltitis etc.). The names of Aristotle, Plato, Xenophon and Socrates appear already in the first page. The content of the book includes descriptions of various rivers in Asia, Africa (including the Nile) and Europe (mostly Greece).

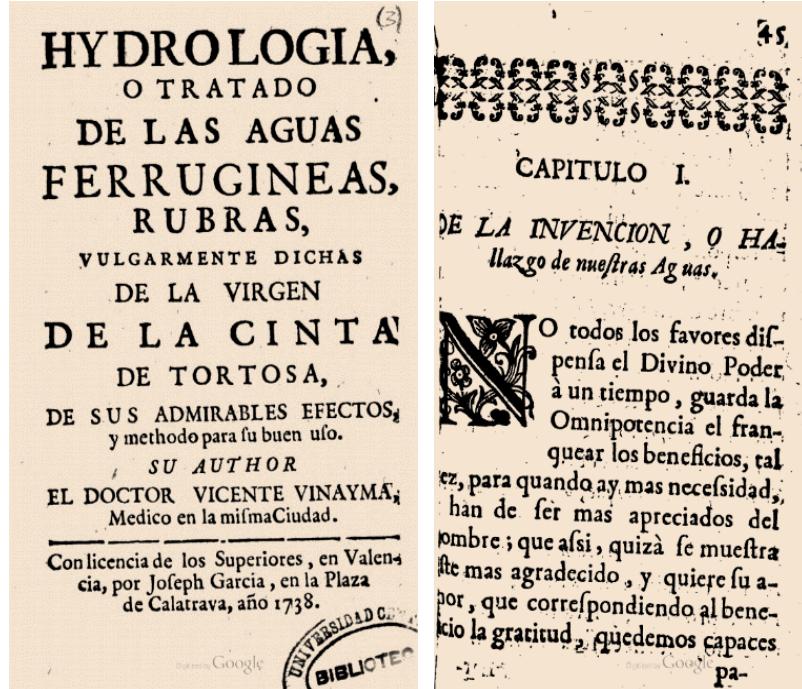

**Figure S4:** Title page and first page of the book *Hydrologia Philosophica* by Samuel Derham (1577–1657, a British physician<sup>11</sup>) (Derham, 1685). As clarified in its subtitle, the book is not quite philosophical but refers to properties of the water of a particular spring.

**Figure S5:** Title page and first page of the book *Hydrologia Brevis Quidem* by Eberhard Melchior (unknown details) (Melchiore, 1694).

<sup>11</sup> <https://www.oxforddnb.com/view/10.1093/ref:odnb/9780198614128.001.0001/odnb-9780198614128-e-7527>.

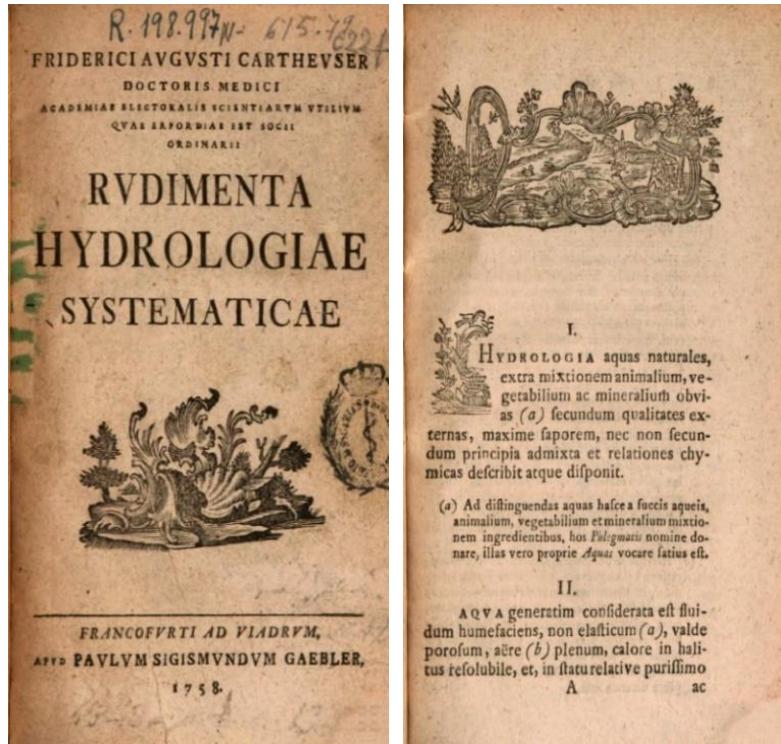

**Figure C6:** Title page and first page of chapter 1 of the book *Hydrologia, o Tratado de las Aguas Ferrugineas ...* by Vicente Vinayma (a Spanish medical doctor; unknown details) (Vinayma, 1738). The book features a divine link of water.

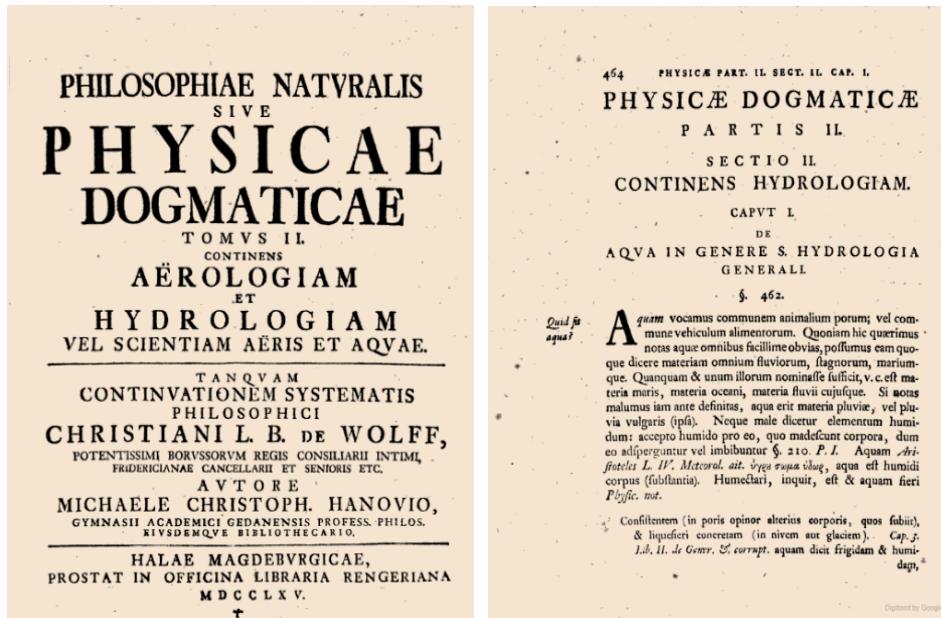

**Figure S7:** Title page and last page with figures of the book *Hydrologie* by Johan Gottschalk Wallerius (1709-1785; a Swedish chemist and mineralogist<sup>12</sup>), translated to German by Johann Daniel Denso<sup>13</sup> (Wallerius, 1751) from the original edition in Swedish (*Hydrologia*; Wallerius, 1748).

<sup>12</sup> [https://en.wikipedia.org/wiki/Johan\\_Gottschalk\\_Wallerius](https://en.wikipedia.org/wiki/Johan_Gottschalk_Wallerius).

<sup>13</sup> [https://de.wikipedia.org/wiki/Johann\\_Daniel\\_Denso](https://de.wikipedia.org/wiki/Johann_Daniel_Denso).

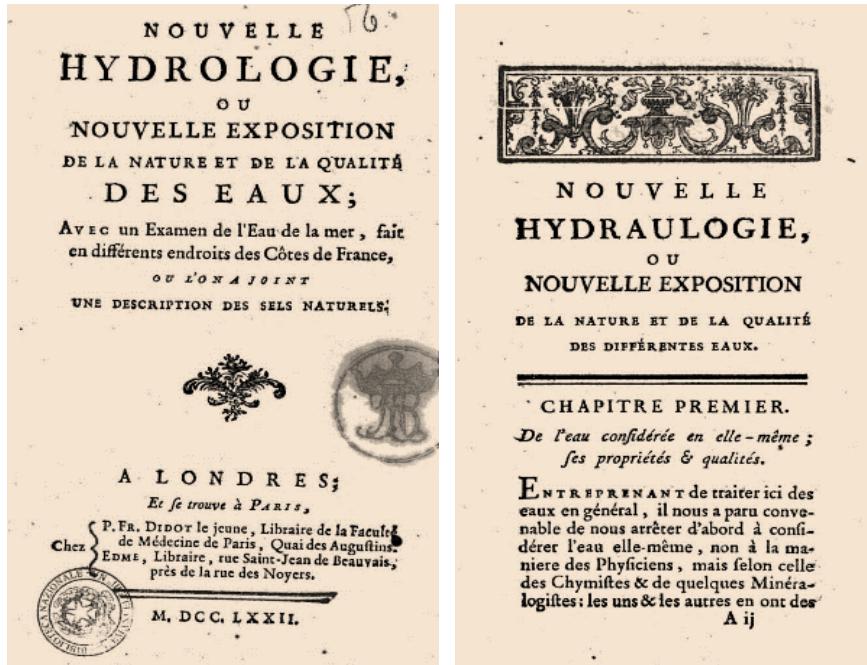

**Figure S8:** Title page and first page of the book *Rudimenta hydrologiae systematicae* by Friedrich August Charteseur (medical doctor; unknown further details) (Cartheseur, 1758).

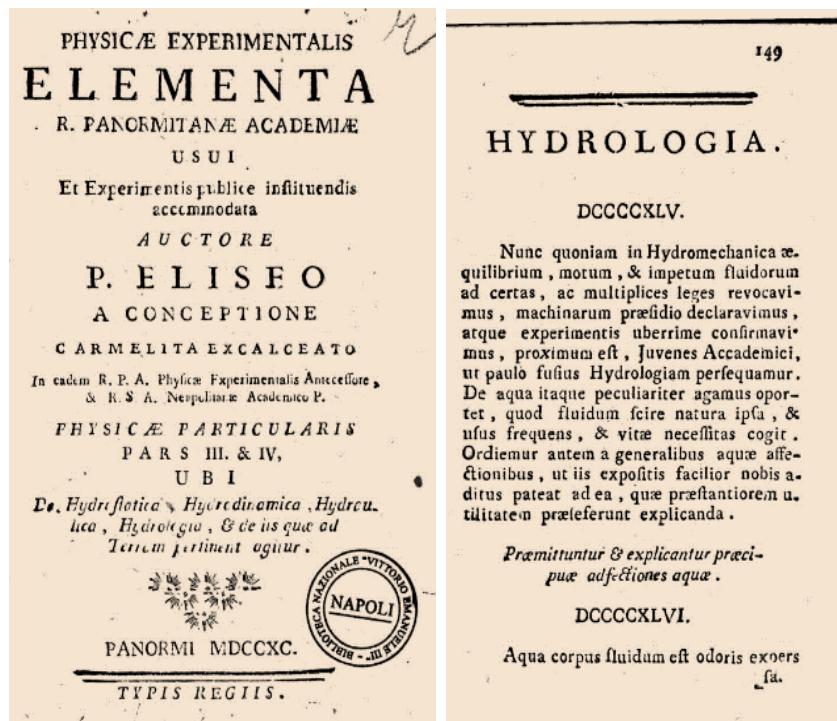

**Figure S9:** Title page and first page of the book *Philosophiae Naturalis sive Physicae Dogmaticae* (vol. 2 of 4) by Michael Christoph Hanovius (Michael Christoph Hanov, 1695-1773; a German meteorologist, historian and mathematician<sup>14</sup>) (Hanovius, 1765). The book cover states that it is a continuation of the philosophical system of the German philosopher Christianus de Wolff<sup>15</sup>. An impressive element in the title is the “dogmatic” character, which today would be regarded inconsistent with physics. In addition to *hydrologia*, the book contains *aerologia*, perhaps influenced by the Hippocratic discourse “Περὶ αέρων, νοσών, τόπων”.

<sup>14</sup> [https://en.wikipedia.org/wiki/Michael\\_Christoph\\_Hanow](https://en.wikipedia.org/wiki/Michael_Christoph_Hanow).

<sup>15</sup> [https://en.wikipedia.org/wiki/Christian\\_Wolff\\_\(philosopher\)](https://en.wikipedia.org/wiki/Christian_Wolff_(philosopher)).

**Figure S10:** Title page and first page of the book *Nouvelle Hydrologie* by Antoine Grimoald Monnet (1734-1817; a French mineralogist<sup>16</sup>) (Monnet, 1772). In addition to the quality of potable water, it examines the sea water and the natural salts (sels naturels). Notable is the spelling *hydraulogie* (likely influenced by *hydraulics*) in the first page, also used throughout the entire book, which is different from that in the book cover, *hydrologie*.

**Figure S11:** Title page and first page of the book *Physicae Experimentalis Elementa* by p. Eliseo a Conceptione (Eliseo della Concezione, 1725-1809, an Italian scholar<sup>17</sup>) (Eliseo a Conceptione, 1790). The book contains hydrostatics, hydrodynamics, hydraulics and hydrology.

<sup>16</sup> [https://fr.wikipedia.org/wiki/Antoine\\_Grimoald\\_Monet](https://fr.wikipedia.org/wiki/Antoine_Grimoald_Monet).

<sup>17</sup> [https://www.treccani.it/enciclopedia/eliseo-della-concezione\\_\(Dizionario-Biografico\)/](https://www.treccani.it/enciclopedia/eliseo-della-concezione_(Dizionario-Biografico)/).

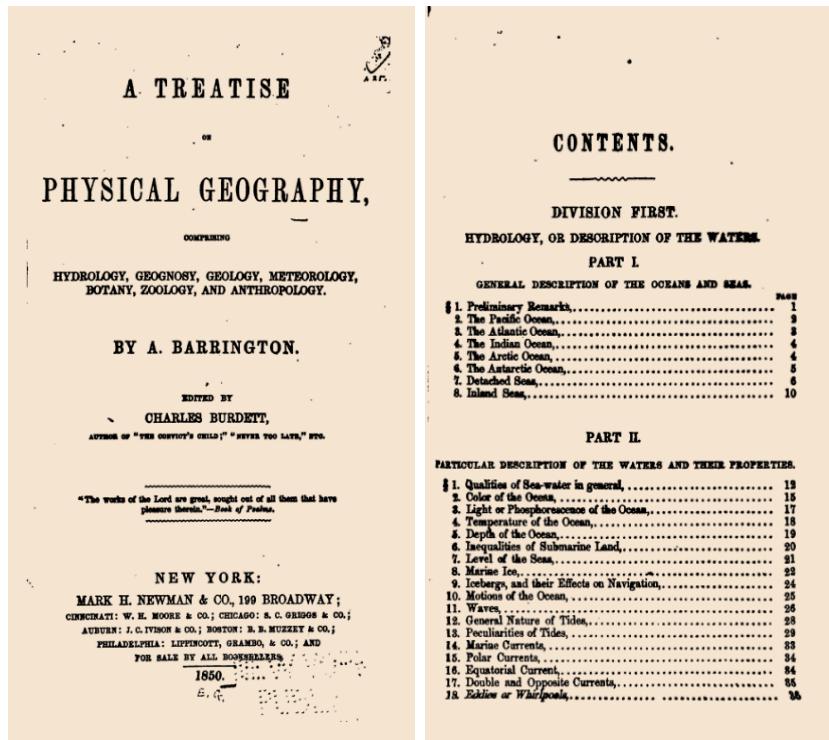

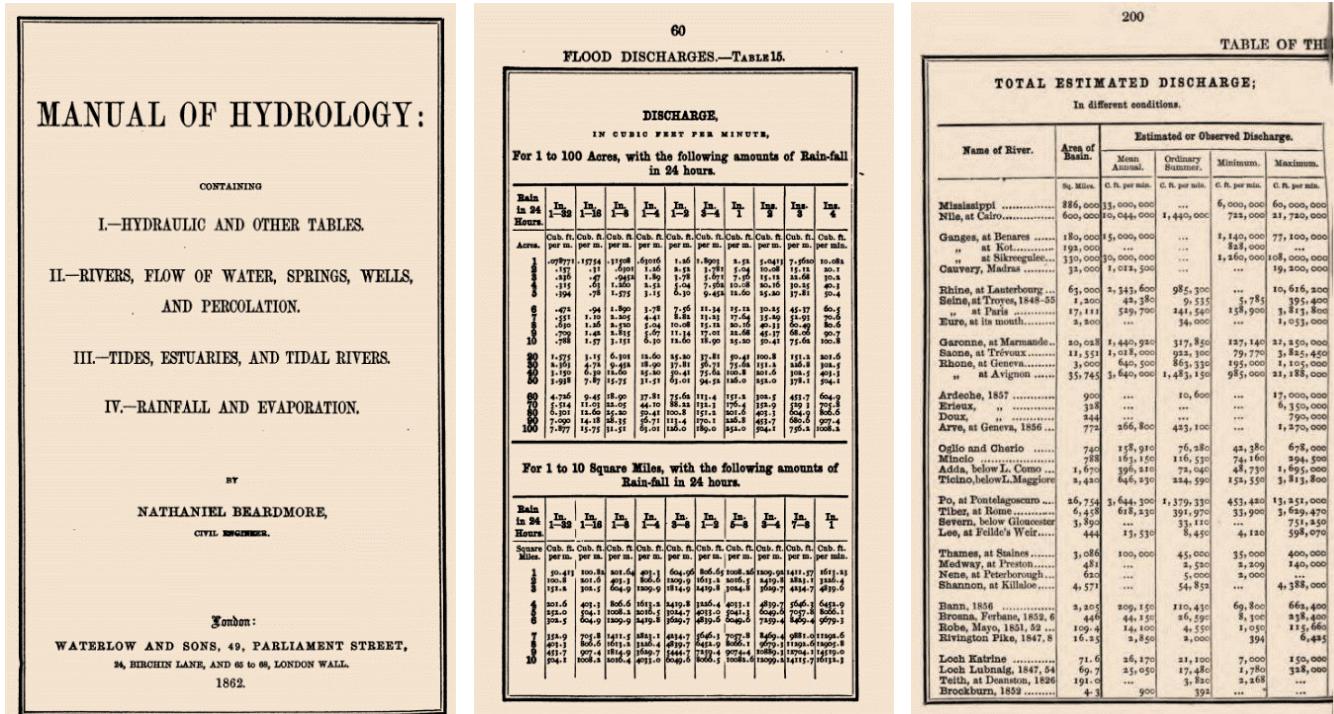

Figure S12: Title page and first page of the Contents of the book *A Treatise on Physical Geography* by A. Barrington (1850), whose first chapter is devoted to hydrology, beginning with a geographic description of the oceans.

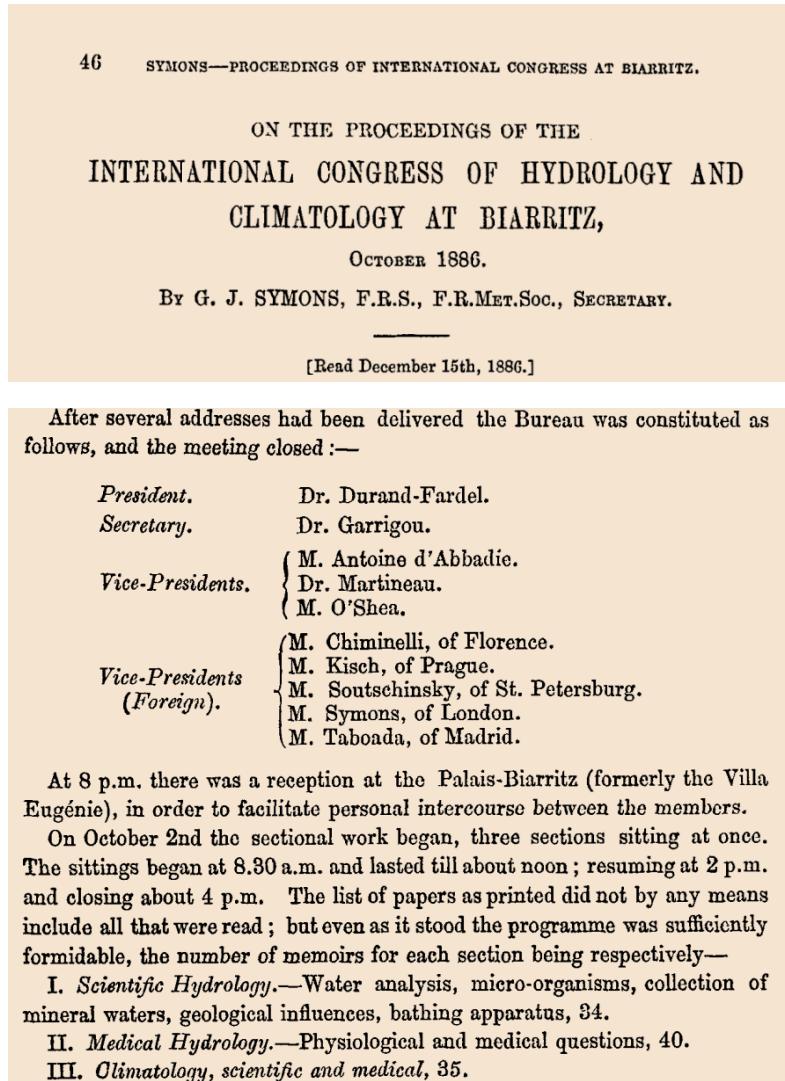

Figure S14: Part of the paper *On the proceedings of the international congress of hydrology and climatology at Biarritz* (Symons, 1887).

#### S4. Original texts of the quotations translated in the article to English

##### S4.1 Quotations from the Introduction

[OT1]. ἀφ' ἣς αἰτίας καὶ μῦθος ἐπλάσθη τις: ώς Ἡρακλέους καταπολεμήσαντος τὸν Ἀχελῶν καὶ ἐνεγκαμένου τῆς νίκης ἄθλον τὸν Δημανείρας γάμον τῆς Οἰνέως θυγατρός, ἣν πεποίηκε Σοφοκλῆς τοιαῦτα λέγουσαν «μνηστὴρ γάρ ἦν μοι ποταμός, Ἀχελῶν λέγω, ὃς μ' ἐν τρισὶν μορφαῖσιν ἔξήτει πατρός, φοιτῶν ἐναργῆς ταῦρος, ἄλλοτ' αἰόλος δράκων ἐλικτός, ἄλλοτ' ἀνδρείῳ κύτει βούπρωρος». προστιθέασι δ' ἔνιοι καὶ τὸ τῆς Ἀμαλθείας τοῦτ' εἶναι λέγοντες κέρας, ὃ ἀπέκλασεν ὁ Ἡρακλῆς τοῦ Ἀχελώου καὶ ἔδωκεν Οἰνεῖ τῶν γάμων ἔδνον· οἱ δ' εἰκάζοντες ἔξ αὐτῶν τὰληθὲς ταύρῳ μὲν ἐοικότα λέγεσθαι τὸν Ἀχελῶν φασι, καθάπερ καὶ τοὺς ἄλλους ποταμούς, ἀπό τε τῶν ἥχων καὶ τῶν κατὰ τὰ ῥεῖθρα καμπῶν, ἃς καλοῦσι κέρατα, δράκοντι δὲ διὰ τὸ μῆκος καὶ τὴν σκολιότητα, βούπρωρον δὲ διὰ τὴν αὐτὴν αἰτίαν δι' ἣν καὶ ταυρωπόν· τὸν Ἡρακλέα δὲ καὶ ἄλλως εὐεργετικὸν ὄντα καὶ τῷ Οἰνεῖ κηδεύσοντα παραχώμαστι τε καὶ διοχετείαις βιάσασθαι τὸν ποταμὸν πλημμελῶς ῥέοντα καὶ πολλὴν τῆς Παραχελώιτιδος ἀναψύξαι χαριζόμενον τῷ Οἰνεῖ· καὶ τοῦτ' εἶναι τὸ τῆς Ἀμαλθείας κέρας. (Στράβων, Γεωγραφικά, 10.2.19)

[OT2]. Ἐχουσι δὲ πλείους οἱ ἄρρενες τῶν θηλειῶν ὀδόντας καὶ ἐν ἀνθρώποις καὶ ἐπὶ προβάτων καὶ αἰγῶν καὶ ύῶν· ἐπὶ δὲ τῶν ἄλλων οὐ τεθεώρηται πω. [...] Φύονται δ' οἱ τελευταῖοι τοῖς ἀνθρώποις γόμφιοι, οὓς καλοῦσι κραντῆρας, περὶ τὰ εἴκοσιν ἔτη καὶ ἀνδράσι καὶ γυναιξίν. Ἡδη δέ τισι γυναιξὶ καὶ ὄγδοήκοντα ἐτῶν οὐσαις ἔφυσαν γόμφιοι ἐν τοῖς ἑσχάτοις. (Ἀριστοτέλης, *Tῶν περὶ τὰ ζῶα ιστοριῶν*, 2.3.2 – 2.4.1)

[OT3]. [Σωκράτης:] τοῦτο [το χάσμα] ὅπερ Ὄμηρος εἶπε, λέγων αὐτό “τῇλε μάλ”, ἥχι βάθιστον ύπὸ χθονός ἐστι βέρεθρον” ὁ καὶ ἄλλοθι καὶ ἐκεῖνος καὶ ἄλλοι πολλοὶ τῶν ποιητῶν Τάρταρον κεκλήκασιν. εἰς γὰρ τοῦτο τὸ χάσμα συρρέουσί τε πάντες οἱ ποταμοὶ καὶ ἐκ τούτου πάλιν ἐκρέουσιν· γίγνονται δὲ ἔκαστοι τοιοῦτοι δι’ οἷς ἂν καὶ τῆς γῆς ρέωσιν. [...] ὅταν τε οὖν ὑποχωρήσῃ τὸ ὕδωρ εἰς τὸν τόπον τὸν δὴ κάτω καλούμενον, τοῖς κατ’ ἐκεῖνα τὰ ρέύματα διὰ τῆς γῆς εἰσρεῖ τε καὶ πληροῖ αὐτὰ ὕσπερ οἱ ἐπαντλοῦντες· ὅταν τε αὐτὸν ἐκεῖθεν μὲν ἀπολίπῃ, δεῦρο δὲ ὄρμήσῃ, τὰ ἐνθάδε πληροῖ αὖθις. (Πλάτων, *Φαίδων*, 14.112α)

[OT4]. τὸ κατ’ ἐνιαυτὸν ὕδωρ ἐκαρποῦτ’ ἐκ Διός, οὐχ ώς νῦν ἀπολλῦσα ρέον ἀπὸ ψιλῆς τῆς γῆς εἰς θάλατταν, ἀλλὰ πολλὴν ἔχουσα καὶ εἰς αὐτὴν καταδεχομένη, τῇ κεραμίδι στεγούσῃ γῇ διαταμευομένη, τὸ καταποθὲν ἐκ τῶν ύψηλῶν ὕδωρ εἰς τὰ κοῦλα ἀφεῖσα κατὰ πάντας τοὺς τόπους παρείχετο ἄφθονα κρηνῶν καὶ ποταμῶν νάματα. (Πλάτων, *Κριτίας*, 111d)

[OT5]. τὴν μὲν μετὰ λόγου ἀληθῆ δόξαν ἐπιστήμην εἶναι, τὴν δὲ ἄλογον ἐκτὸς ἐπιστήμης. (Πλάτων, *Θεαίτητος*, 201d)

[OT6]. [Γλαύκων:] τοὺς δὲ ἀληθινούς [φιλοσόφους], ἔφη, τίνας λέγεις; [Σωκράτης:] τοὺς τῆς ἀληθείας, ἣν δὲ ἐγώ, φιλοθεάμονας. (Πλάτων, *Πολιτεία*, Ε, 475e)

#### S4.2 Quotations from section “Hydrology at the birth of science”

[OT7]. «ὑετούς δὲ [γίγνεσθαι] ἐκ τῆς ἀτμίδος τῆς ἐκ γῆς ύφ’ ἥλιον ἀναδιδομένης» (Ιππόλυτος, *Φιλοσοφούμενα ἡ Κατὰ Πασῶν Αἵρεσεων Ἔλεγχος*, I, 5)

[OT8]. ἀνέμους δὲ γεννᾶσθαι, ὅταν ἐκ <μέρους> πεπυκνωμένος ἀήρ καὶ ἀρθεὶς φέρηται· συνελθόντα δὲ καὶ ἐπὶ πλεῖον παχυνθέντα νέφη γεννᾶσθαι καὶ οὕτως εἰς ὕδωρ μεταβάλλειν. χάλαζαν δὲ γίνεσθαι, ὅταν ἀπὸ τῶν νεφῶν τὸ ὕδωρ καταφερόμενον παγῇ· χιόνα δέ, ὅταν αὐτὰ ταῦτα ἐνυγρότερα ὄντα πῆξιν λάβῃ. ἀστραπὴν δὲ ὅταν τὰ νέφη διστῆται βίαιι πνευμάτων [...] ἵριν δὲ γεννᾶσθαι τῶν ἥλιακῶν αὐγῶν εἰς ἀέρα συνεστῶτα πιπτουσῶν. (Ιππόλυτος, *Φιλοσοφούμενα ἡ Κατὰ Πασῶν Αἵρεσεων Ἔλεγχος*, I, 6)

[OT9]. πηγὴ δὲ ἐστὶ θάλασσαν ὕδατος, πηγὴ δὲ ἀνέμοιο·  
οὕτε γὰρ ἐν νέφεσιν <γίνοιτο κεῖται> ἀνέμῳ  
ἐκπνείοντος> ἐσωθεν ἄνευ πόντου μεγάλοιο  
οὕτε ροαὶ ποταμῶν οὔτ’ αἰ<θέρος> ὅμβριον ὕδωρ,  
ἀλλὰ μέγας πόντος γενέτωρ νεφέων ἀνέμων τε  
καὶ ποταμῶν. (Ξενοφάνης, *Ἐν τῷ Περὶ φύσεως*, Απόσπασμα B 30)

[OT10]. τοὺς δὲ ποταμούς καὶ ἀπὸ τῶν ὅμβρων λαμβάνειν τὴν ὑπόστασιν καὶ ἐξ ὕδάτων τῶν ἐν τῇ γῇ· εἶναι γὰρ αυτὴν κοῦλην καὶ ἔχειν ὕδωρ ἐν τοῖς κοιλώμασιν. (Ιππόλυτος, *Φιλοσοφούμενα ἡ Κατὰ Πασῶν Αἵρεσεων Ἔλεγχος*, I, 8)

[OT11]. μάλιστα δὲ τῆς γῆς ἡ ἀρίστη αἰεὶ τὰς μεταβολὰς τῶν οἰκητόρων εἰχεν, ἡ τε νῦν Θεσσαλίᾳ καλουμένη καὶ Βοιωτίᾳ Πελοποννήσου τε τὰ πολλὰ πλὴν Ἀρκαδίας, τῆς τε ἄλλης ὅσα ἦν κράτιστα. διὰ γὰρ ἀρετὴν γῆς αἱ τε δυνάμεις τισὶ μείζους ἐγγιγνόμεναι στάσεις ἐνεποίουν ἐξ ὧν ἐφθείροντο, καὶ ἄμα ὑπὸ ἀλλοφύλων μᾶλλον ἐπεβουλεύοντο. τὴν γοῦν Ἀττικὴν ἐκ τοῦ ἐπὶ πλεῖστον διὰ τὸ λεπτόγεων ἀστασίαστον οὖσαν ἄνθρωποι ὥκουν οἱ αὐτοὶ αἰεί. καὶ παράδειγμα τόδε τοῦ λόγου οὐκ ἐλάχιστον ἐστι διὰ τὰς μετοικίας ἐξ τὰ ἄλλα μὴ ὁμοίως αὐξηθῆναι· ἐκ γὰρ τῆς ἄλλης Ἑλλάδος οἱ πολέμῳ ἡ στάσει ἐκπίπτοντες παρ’ Ἀθηναίους οἱ δυνατώτατοι ὡς βέβαιον ὃν ἀνεχώρουν, καὶ πολῖται γιγνόμενοι εὐθὺς ἀπὸ παλαιοῦ μείζω ἔτι ἐποίησαν πλήθει ἀνθρώπων τὴν πόλιν, ὥστε καὶ ἐξ Ἰωνίαν ὕστερον ὡς οὐχ ἱκανῆς οὖσης τῆς Ἀττικῆς ἀποικίας ἐξέπεμψαν. (Θουκυδίδης, *Ἱστορία τοῦ Πελοποννησιακοῦ Πολέμου*, 1.2.3-6)

[OT12]. περὶ δὲ τῶν ὅμβρίων καὶ ὁκόσα ἀπὸ χιόνος φράσω ὄκως ἔχει. τὰ μὲν οὖν ὅμβρια κουφότατα καὶ γλυκύτατά ἐστι καὶ λεπτότατα καὶ λαμπρότατα. τίν τε γὰρ ἀρχὴν ὁ ἥλιος ἀνάγει καὶ ἀναρπάζει τοῦ ὕδατος τὸ τε λεπτότατον καὶ κουφότατον.

δῆλον δὲ οἱ ἄλες ποιέουσι. τὸ μὲν γὰρ ἀλμυρὸν λείπεται αὐτοῦ ὑπὸ πάχεος καὶ βάρεος καὶ γίνεται ἄλες, τὸ δὲ λεπτότατον ὁ ἥλιος ἀναρπάζει ὑπὸ κουφότητος· ἀνάγει δὲ τὸ τοιοῦτο οὐκ ἀπὸ τῶν ύδάτων μοῦνον τῶν λιμναίων, ἀλλὰ καὶ ἀπὸ τῆς θαλάσσης καὶ ἔξ απάντων ἐν ὀκόσοισι υγρόν τι ἔνεστιν. ἔνεστι δὲ ἐν παντὶ χρήματι. καὶ ἔξ αὐτῶν τῶν ἀνθρώπων ἄγει τὸ λεπτότατον τῆς ἰκμάδος καὶ κουφότατον. [...] ἔτι δὲ πρὸς τούτοισι ἐπειδὴν ἀρπασθῇ καὶ μετεωρισθῇ περιφερόμενον καὶ καταμεμιγμένον ἐς τὸν ἡέρα, τὸ μὲν θολερὸν αὐτοῦ καὶ νυκτοειδὲς ἐκκρίνεται καὶ ἔξισταται καὶ γίνεται ἡὴρ καὶ ὄμιχλη, τὸ δὲ λαμπρότατον [p. 92] καὶ κουφότατον αὐτοῦ λείπεται καὶ γλυκαίνεται ὑπὸ τοῦ ἥλιου καιόμενόν τε καὶ ἐψόμενον. γίνεται δὲ καὶ τἄλλα πάντα τὰ ἐψόμενα αἰεὶ γλυκύτερα. ἔως μὲν οὖν διεσκεδασμένον ἥ καὶ μήπω συνεστήκῃ, φέρεται μετέωρον. ὀκόταν δέ κουν ἀθροισθῇ καὶ συστραφῇ ἐς τὸ αὐτὸν ὑπὸ ἀνέμων ἀλλήλοισιν ἐναντιωθέντων ἔξαίφνης, τότε καταρρίγγνυται. (Ιπποκράτης, *Περὶ Αέρων, Υδάτων, Τόπων*, 8)

[OT13]. ἄριστα [ῦδατα] δὲ ὄκόσα ἐκ μετεώρων χωρίων ῥεῖ καὶ λόφων γεηρῶν. αὐτά τε γάρ ἐστι γλυκέα καὶ [60] λευκὰ καὶ τὸν οἶνον φέρειν ὀλίγον οἴᾳ τέ ἐστιν. τοῦ δὲ χειμῶνος θερμὰ γίνεται, τοῦ δὲ θέρεος ψυχρά. οὗτο τὸν εἴη ἐκ βαθυτάτων πηγέων (Ιπποκράτης, *Περὶ Αέρων, Υδάτων, Τόπων*, 7)

#### S4.3 Quotations from section “Aristotle”

[OT14]. φαμὲν δὴ πῦρ καὶ ἀέρα καὶ ὕδωρ καὶ γῆν γίγνεσθαι ἔξ ἀλλήλων, καὶ ἔκαστον ἐν ἑκάστῳ ὑπάρχειν τούτων δυνάμει, ὥσπερ καὶ τῶν ἄλλων οἷς ἐν τι καὶ ταύτων ὑπόκειται, εἰς δὲ δὴ ἀναλύονται ἔσχατον. (Ἀριστοτέλης, *Μετεωρολογικά*, A1, 339a,b)

[OT15]. ἔτι δ' ἡ ὑπὸ τοῦ ἥλιου ἀναγωγὴ τοῦ ὑγροῦ ὁμοία τοῖς θερμαινομένοις ἐστὶν ὕδασιν ὑπὸ πυρός. (αὐτόθι, B2, 355a 15)

[OT16]. συνίσταται πάλιν ἡ ἀτμὶς ψυχομένη διά τε τὴν ἀπόλειψιν τοῦ θερμοῦ καὶ τὸν τόπον, καὶ γίνεται ὕδωρ ἔξ ἀέρος· γενόμενον δὲ πάλιν φέρεται πρὸς τὴν γῆν. ἔστι δ' ἡ μὲν ἔξ ὕδατος ἀναθυμίασις ἀτμὶς, ἡ δὲ ἔξ ἀέρος εἰς ὕδωρ νέφος. (Ἀριστοτέλης, *Μετεωρολογικά*, A9, 346b 30)

[OT17]. ὥστε [τὴν θάλατταν] οὐδέποτε ξηρανεῖται· πάλιν γὰρ ἐκεῖνο φθήσεται καταβὰν εἰς τὴν αὐτὴν τὸ προανελθόν. (Ἀριστοτέλης, *Μετεωρολογικά*, B3, 356b 26)

[OT18]. κάν μὴ κατ' ἐνιαυτὸν ἀποδιδῷ καὶ καθ' ἔκάστην ὁμοίως χώραν, ἀλλ' ἐν γέ τισιν τεταγμένοις χρόνοις ἀποδίδωσι πᾶν τὸ ληφθέν. (Ἀριστοτέλης, *Μετεωρολογικά*, B2, 355a 26)

[OT19]. ἀλλὰ μὴν εἰπερ καὶ οἱ ποταμοὶ γίγνονται καὶ φείρονται καὶ μὴ ἀεὶ οἱ αὐτοὶ τόποι τῆς γῆς ἔνυδροι, καὶ τὴν θάλατταν ἀνάγκη μεταβάλλειν ὁμοίως. τῆς δὲ θαλάττης τὰ μὲν ἀπολειπούσης τὰ δὲ ἐπιούσης ἀεὶ φανερὸν ὅτι τῆς πάσης γῆς οὐκ ἀεὶ τὰ αὐτὰ τὰ μέχρι οὗ αὗτις τροπέων τῶν θερινέων. τούτων δὲ πέρι οὐδενὸς οὐδὲν οἰός τε ἐγενόμην παραλαβεῖν παρὰ τῶν Αἰγυπτίων, ιστορέων αὐτοὺς ἡτινα δύναμιν ἔχει ὁ Νεῖλος τὰ ἐμπαλιν πεφυκέναι τῶν ἄλλων ποταμῶν· ταῦτα τε δὴ τὰ λελεγμένα βουλόμενος εἰδέναι ιστόρεον καὶ ὅ τι αὔρας ἀποπνεούσας μοῦνος ποταμῶν πάντων οὐ παρέχεται. (Ηρόδοτος, *Ιστορίαι*, 2, 19)

[OT20]. ὅτι δὲ γίνεται ἀτμίζουσα πότιμος καὶ οὐκ εἰς θάλατταν συγκρίνεται τὸ ἀτμίζον, ὅταν συνιστῇται πάλιν, πεπειραμένοι λέγωμεν. (Ἀριστοτέλης, *Μετεωρολογικά*, B3, 358b)

#### S4.4 Quotations from section “The Nile paradox and its solution by Aristotle”

[OT21]. τοῦ ποταμοῦ δὲ φύσιος πέρι οὕτε τι τῶν ἱρέων οὕτε ἄλλου οὐδενὸς παραλαβεῖν ἐδυνάσθην. πρόθυμος δὲ ἔα τάδε παρ' αὐτῶν πυθέσθαι, ὅ τι κατέρχεται μὲν ὁ Νεῖλος πληθύων ἀπὸ τροπέων τῶν θερινέων ἀρξάμενος ἐπὶ ἔκατον ἥμέρας, πελάσας δὲ ἐξ τὸν ἀριθμὸν τουτέων τῶν ἡμερέων ὀπίσω ἀπέρχεται ἀπολείπων τὸ ῥέεθρον, ὥστε βραχὺς τὸν χειμῶνα ἀπαντα διατελέει ἐών μέχρι οὗ αὗτις τροπέων τῶν θερινέων. τούτων δὲ πέρι οὐδενὸς οὐδὲν οἰός τε ἐγενόμην παραλαβεῖν παρὰ τῶν Αἰγυπτίων, ιστορέων αὐτοὺς ἡτινα δύναμιν ἔχει ὁ Νεῖλος τὰ ἐμπαλιν πεφυκέναι τῶν ἄλλων ποταμῶν· ταῦτα τε δὴ τὰ λελεγμένα βουλόμενος εἰδέναι ιστόρεον καὶ ὅ τι αὔρας ἀποπνεούσας μοῦνος ποταμῶν πάντων οὐ παρέχεται. (Ηρόδοτος, *Ιστορίαι*, 2, 19)

[OT22]. ἀλλὰ Ἐλλήνων μὲν τινὲς ἐπίσημοι βουλόμενοι γενέσθαι σοφίην ἔλεξαν περὶ τοῦ ὕδατος τούτου τριφασίας ὁδούς· τῶν τὰς μὲν δύο τῶν ὁδῶν οὐδὲν ἀξιῶς μνησθῆναι εἰ μὴ ὅσον σημῆναι βουλόμενος μοῦνον. (Ηρόδοτος, *Ιστορίαι*, 2, 20)

[OT23]. τῶν δὲ ἑτέρη μὲν λέγει τοὺς ἐτησίας ἀνέμους εἶναι αἰτίους πληθύειν τὸν ποταμόν, κωλύοντας ἐξ θάλασσαν ἐκρέειν τὸν Νεῖλον. πολλάκις δὲ ἐτησίαι μὲν οὐκων ἐπνευσαν, ὁ δὲ Νεῖλος τῶντὸ ἐργάζεται. πρὸς δέ, εἰ ἐτησίαι αἰτιοὶ ἦσαν, χρῆν καὶ τοὺς ἄλλους ποταμούς, ὅσοι τοῖσι ἐτησίῃσι ἀντίοι ῥέουσι, ὁμοίως πάσχειν καὶ κατὰ τὰ αὐτὰ τῷ Νεῖλῷ, καὶ μᾶλλον ἔτι τοσούτῳ

οσφρ ἐλάσσονες ἔόντες ἀσθενέστερα τὰ ύεύματα παρέχονται. εἰσὶ δὲ πολλοὶ μὲν ἐν τῇ Συρίῃ ποταμοὶ πολλοὶ δὲ ἐν τῇ Λιβύῃ, οἵ οὐδὲν τοιοῦτο πάσχουσι οἴοντι καὶ ὁ Νεῖλος. (Ἡρόδοτος, *Ιστορίαι*, 2, 20)

[OT24]. ἡ δ' ἑτέρη ἀνεπιστημονεστέρη μὲν ἐστὶ τῆς λελεγμένης, λόγῳ δὲ εἰπεῖν θωμασιωτέρη· ἡ λέγει ἀπὸ τοῦ Ὡκεανοῦ ῥέοντα αὐτὸν ταῦτα μηχανᾶσθαι, τὸν δὲ Ὡκεανὸν γῆν περὶ πᾶσαν ῥέειν. [...] ὁ δὲ περὶ τοῦ Ὡκεανοῦ λέξας ἐς ἀφανὲς τὸν μῆθον ἀνενείκας οὐκ ἔχει ἔλεγχον· οὐ γάρ τινὰ ἔγωγε οἶδα ποταμὸν Ὡκεανὸν ἔόντα, Ὄμηρον δὲ ἡ τινὰ τῶν πρότερον γενομένων ποιητέων δοκέω τὸ οὖνομα εὑρόντα ἐς ποίησιν ἐσενείκασθαι. (Ἡρόδοτος, *Ιστορίαι*, 2, 21&23)

[OT25]. ἡ δὲ τρίτη τῶν ὄδῶν πολλὸν ἐπιεικεστάτη ἔοῦσα μάλιστα ἔψευσται· λέγει γὰρ δὴ οὐδὲν φαμένη τὸν Νεῖλον ῥέειν ἀπὸ τηκομένης χιόνος· δος ῥέει μὲν ἐκ Λιβύης διὰ μέσων Αἰθίπων, ἐκδιδοῖ δὲ ἐς Αἴγυπτον. κῶς ὃν δῆτα ῥέοι ἀν ἀπὸ χιόνος, ἀπὸ τῶν θερμοτάτων ύεων ἐς τὰ ψυχρότερα τὰ πολλά ἐστι· ἀνδρί γε λογίζεσθαι τοιούτων πέρι οἴφ τε ἔόντι, ως οὐδὲ οἰκὸς ἀπὸ χιόνος μιν ῥέειν, πρῶτον μὲν καὶ μέγιστον μαρτύριον οἱ ἄνεμοι παρέχονται πνέοντες ἀπὸ τῶν χωρέων τουτέων θερμοί· δεύτερον δὲ ὅτι ἀνομβρος ἡ χώρη καὶ ἀκρύσταλλος διατελέει ἔοῦσα, ἐπὶ δὲ χιόνι πεσούσῃ πᾶσα ἀνάγκη ἐστὶ ὅσαι ἐν πέντε ἡμέρησι, ὥστε, εἰ ἔχιόνιζε, ὕετο ἀν ταῦτα τὰ χωρία· τρίτα δὲ οἱ ἄνθρωποι ὑπὸ τοῦ καύματος μέλανες ἔόντες. ίκτινοι δὲ καὶ χειλιδόνες δι' ἔτεος ἔόντες οὐκ ἀπολείπουσι, γέρανοι δὲ φεύγουσαι τὸν χειμῶνα τὸν ἐν τῇ Σκυθικῇ χώρῃ γινόμενον φοιτῶσι ἐς χειμασίην ἐς τοὺς τόπους τούτους. εἰ τοίνυν ἔχιόνιζε καὶ ὕσον ὃν ταύτην τὴν χώρην δι' ἦς τε ῥέει καὶ ἐκ τῆς ἄρχεται ύεων ὁ Νεῖλος, ἦν ἀν τούτων οὐδέν, ως ἡ ἀνάγκη ἔλεγχει. (Ἡρόδοτος, *Ιστορίαι*, 2, 22)

[OT26]. Θαλῆς τοὺς ἐτησίας ἀνέμους οὔεται πνέοντας τῇ Αἴγυπτῳ ἀντιπροσώπους ἐπαίρειν τοῦ Νείλου τὸν ὅγκον διὰ τὸ τάς ἐκροάς αὐτοῦ τῇ παροιδήσει τοῦ ἀντιπαρήκοντος πελάγους ἀνακόπτεσθαι. (Αέτιος IV, 1, 1)

[OT27]. εἰ δὲ δεῖ μεμψάμενον γνώμας τὰς προκειμένας αὐτὸν περὶ τῶν ἀφανέων γνώμην ἀποδέξασθαι, φράσω δι' ὅ τι μοι δοκεῖ πληθύνεσθαι ὁ Νεῖλος τὸν θέρεος· τὴν χειμερινὴν ὥρην ἀπελαυνόμενος ὁ ἥλιος ἐκ τῆς ἀρχαίης διεξόδου ὑπὸ τῶν χειμῶνων ἔρχεται τῆς Λιβύης τὰ ἄνω. ως μέν νυν ἐν ἐλαχίστῳ δηλῶσαι, πᾶν εἴρηται· τῆς γὰρ ἀν ἀγχοτάτῳ τε ἡ χώρης οὗτος ὁ θεὸς καὶ κατὰ ἡντινα, ταύτην οἰκὸς διψῆν τε ὑδάτων μάλιστα καὶ τὰ ἐγχώρια ύεύματα μαραίνεσθαι τῶν ποταμῶν. (Ἡρόδοτος, *Ιστορίαι*, 2, 24)

[OT28]. Ὄτι οἱ ἐτήσιαι πνέουσι κατὰ τὸν καιρὸν τοῦ ἀκμαιοτάτου θέρους δι' αἰτίαν τοιαύτην. Ὁ ἥλιος μετεωρότερος καὶ ἀπὸ τῶν μεσημβρινῶν τόπων ἀρκτικώτερος γινόμενος λύει τὰ ὑγρὰ τὰ ἐν ταῖς ἀρκτοῖς· λυόμενα δὲ ταῦτα ἔξαεροῦται, ἔξαερούμενα δὲ πνευματοῦται, καὶ ἐκ τούτων γίνονται οἱ ἐτήσιαι ἀνεμοί [...]. Ἐκεῖ δὴ ταῦτα ἐκφερόμενα προσπίπτει τοῖς ὑψηλοτάτοις ὅρεσι τῆς Αἰθιοπίας, καὶ πολλὰ καὶ ἀθρόα γινόμενα ἀπεργάζεται ὑετούς· καὶ ἐκ τῶν ὑετῶν τούτων ὁ Νεῖλος πλημμυρεῖ τοῦ θέρους, ἀπὸ τῶν μεσημβρινῶν καὶ ἔχηρῶν τόπων ύεων. Καὶ τοῦτο Ἀριστοτέλης ἐπραγματεύσατο· αὐτὸς γὰρ ἀπὸ τῆς φύσεως ἔργῳ κατενόησεν, ἀξιώσας πέμψαι Ἀλεξανδρον τὸν Μακεδόνα εἰς ἐκείνους τοὺς τόπους καὶ ὄψει τὴν αἰτίαν τῆς τοῦ Νείλου αὐξήσεως παραλαβεῖν. Διό φησιν ως τοῦτο οὐκέτι πρόβλημά ἐστιν· ὥφθη γὰρ φανερῶς ὅτι ἔξ ύετῶν αὐξεῖ. Καὶ <λύεται> τὸ παράδοξον, <ὅτι> ἐν τοῖς ξηροτάτοις τόποις τῆς Αἰθιοπίας, ἐν οἷς οὐτε χειμῶν οὐτε ὕδωρ ἐστί, ξυμβαίνει τοῦ θέρους πλείστους ύετούς γίνεσθαι (Φωτίου *Μυριόβιβλον*, Βίος Πυθαγόρου Ανωνύμου)

[OT29]. Ἐρατοσθένης δὲ οὐκέτι φησὶν <πρόβλημα εἶναι> οὐδὲ ζητεῖν χρῆναι περὶ τῆς αὐξήσεως τοῦ Νείλου, σαφῶς καὶ ἀφικομένων τινῶν εἰς τὰς τοῦ Νείλου πηγὰς καὶ τοὺς ὄμβρους τοὺς γιγνομένους ἐωρακότων, ὥστε κρατύνεσθαι τὴν Ἀριστοτέλους ἀπόδοσιν. (Πρόκλος ο Λύκιος, *Σχόλια, Πλάτωνος Τίμαιος*, 22 Ε—I 121)

[OT30]. τῆς γὰρ Αἰθιοπίας ὑψηλοῖς παρὰ τὰ καθ' ἡμᾶς ὅρεσι διεζωσμένης ύποδεχομένης τε τὰς νεφέλας πρὸς τῶν ἐτησίων ώθουμένας, ἐκδιδόναι τὸν Νεῖλον. ως καὶ <Καλλισθένης> ὁ Περιπατητικός ἐν τῷ τετάρτῳ βιβλίῳ τῶν Ἑλληνικῶν <φησιν> ἔαντὸν συστρατεύσασθαι Ἀλεξάνδρῳ τῷ Μακεδόνι, καὶ γενόμενον ἐπὶ τῆς Αἰθιοπίας εύρειν τὸν Νεῖλον ἐξ ἀπείρων ὄμβρων κατ' ἐκείνην γενομένων> καταφερόμενον. (Ιωάννης Λαυρέντιος ὁ Λυδός, *De mensibus*, 4, 107)

[OT31]. ἐπεὶ καὶ περὶ τὴν Αἰθιοπίαν ὄμβροι συνεχεῖς καταφέρεσθαι ιστοροῦνται περὶ τὸ θέρος καὶ μάλιστα τὴν ἀκμὴν αὐτοῦ· ἀφ' ὃν καὶ ὁ Νεῖλος πληθύειν τοῦ θέρους ύπονοεῖται. Ὁ μὲν οὖν Ποσειδώνιος οὗτοι φέρεται. (Κλεομήδους, *Κυκλική Θεωρία Μετεώρων*, 59)

[OT32]. Καλλισθένης δ' ὁ ιστοριογράφος πρὸς τὰ μικρῷ πρότερον εἰρημένα ύπ' Αναξαγόρου τε καὶ Εὐριπίδου ἀντεῖπεν. αὐτὸς δὲ τὴν αὐτοῦ γνώμην φησίν, ὑδάτων πολλῶν καὶ λαμπρῶν γινομένων κατὰ τὴν Αἰθιοπίαν κατὰ τὰς τοῦ κυνὸς ἀνατολὰς ἔως τῆς ἐπιτολῆς ἀρκτούρου, καθ' οὓς χρόνους καὶ οἱ ἐτησίαι πνέουσιν ἀνεμοί· τούτους γάρ φησι τοὺς ἀνέμους μάλιστα τὰ

νέφη φέρειν πρὸς τὴν Αἰθιοπίαν· ὃν καὶ προσπιπτόντων πρὸς τὰ ὅρη καταρρήγνυσθαι πολὺ πλῆθος ὕδατος, ἀφ' οὗ τὸν Νεῖλον ἀναβαίνειν. (Ανώνυμος Φλωρεντίνος, *Περὶ τῆς τοῦ Νείλου ἀναπληρώσεως διάφοραι δόξαι ή Περὶ τῆς τοῦ Νείλου αναβάσεως*)

[OT33]. Τοῦ γὰρ ἥλιου τὸν καρκίνον τε καὶ λέοντα καὶ παρθένον διερχομένου, μέχρι μὲν τῆς Αὔης ὥσπερ καὶ παρ' ἡμῖν θέρος τε καὶ ἔηρότης διακρατεῖ τὸν ἄέρα, ἀπὸ δὲ τῆς Αὔης ἐπὶ τὴν Αὔξουμιν καὶ τὴν ἄλλην Αἰθιοπίαν χειμῶν ἐπίκειται σφοδρός, οὐδὲ δι' ὅλης ἡμέρας, ἀλλὰ γὰρ ἀπὸ μεσημβρίας ἀρχόμενος ἐκάστοτε, συννεφῆ τε τὸν ἄέρα ποιῶν καὶ ὅμβροις ῥαγδαῖοις τὴν χώραν ἐπικλύζων. Τηνικαῦτα δὲ ἄρα καὶ ὁ Νεῖλος πολὺς ἐπὶ τὴν Αἴγυπτον ἐρχόμενος πελαγίζει τε καὶ κατάρδει τὴν γῆν. Ὄτε δὲ ὁ ἥλιος τὸν αἰγάκερών τε καὶ ὑδρηχόν καὶ ἰχθύας ἐπιπορεύεται, ἀνάπαλιν ὁ ἀήρ τοῖς μὲν Ἀδουλίταις μέχρι τῆς Αὔης ὅμβροις ἐπικλύζει τὴν χώραν, τοῖς δὲ ἀπὸ τῆς Αὔης μέχρι Αὐξούμεως καὶ τῆς ἄλλης Αἰθιοπίας θέρος τέ ἐστι καὶ τὰ ώραῖα τηνικαῦτα τούτοις ἡ γῆ παραδίδωσιν. (Φωτίου *Μυριόβιβλον*, Νοννόσου Ιστορία)

[OT34]. Propter quid aliis fluminibus in hyeme quidem augmentatis, in estate autem multo factis minoribus, solus eorum qui in mare fluunt, multum estate excedit fitque tantus ut civitates sole supersint velut insule? (*Liber Aristotelis de Inundacione Nili*, 1, script from Beullens, 2014)

[OT35]. τὸ δ' ὅτι ἔξ ὅμβρων αἱ ἀναβάσεις μὴ ζητεῖν, μηδὲ τοιούτων δεῖσθαι μαρτύρων οἵους Ποσειδώνιος εἴρηκε. φησὶ γὰρ Καλλισθένη λέγειν τὴν ἐκ τῶν ὅμβρων αἰτίαν τῶν θερινῶν παρὰ Ἀριστοτέλους λαβόντα, ἐκεῖνον δὲ παρὰ Θρασυάλκου τοῦ Θασίου (τῶν ἀρχαίων δὲ φυσικῶν εἰς οὗτος) ἐκεῖνον δὲ παρ' ἄλλουν, τὸν δὲ παρ' Ὄμήρου διπετέα φάσκοντος τὸν Νεῖλον «ἄψ δ' εἰς Αἰγύπτοι διπετέος ποταμοῖο». (Στράβων, *Γεωγραφικά*, 17.1.5)

#### S4.5 Quotations from section “Prominent scientists of the Hellenistic period with relevance to geosciences and hydrology”

[OT36]. Υποτίθεται γὰρ [υπό Αριστάρχου τοῦ Σαμίου] τὰ μὲν ἀπλανέα τῶν ἀστρων καὶ τὸν ἄλιον μένειν ἀκίνητον, τὰν δὲ γὰν περιφέρεσθαι περὶ τὸν ἄλιον κατὰ κύκλου περιφέρειαν, ὃς ἐστιν ἐν μέσῳ τῷ δρόμῳ κείμενος, τὰν δὲ τῶν ἀπλανέων ἀστρων σφαιραν, περὶ τὸ αὐτὸν κέντρον τῷ ἀλίῳ κειμέναν τῷ μεγέθει τηλικαύταν εἶμεν, ὥστε τὸν κύκλον, καθ' ὅν τὰν γὰν ὑποτίθεται περιφέρεσθαι, τοιαύταν ἔχειν ἀναλογίαν ποτὶ τὰν τῶν ἀπλανῶν ἀποστασίαν, οἵαν ἔχει τὸ κέντρον τᾶς σφαιρας ποτὶ τὰν ἐπιφάνειαν. (Ἀρχιμήδης, *Ψαμμίτης*, I)

[OT37]. Πηγῆς ὑπαρχούσης ἐπισκέψασθαι τὴν ἀπόρρυσιν αὐτῆς, τοντέστι τὴν ἀνάβλυσιν, ὅση ἐστίν. εἰδέναι μέντοι χρὴ ὅτι οὐκ ἀεὶ ἡ ἀνάβλυσις ἡ αὐτὴ διαμένει. ὅμβρων μὲν γὰρ ὅντων ἐπιτείνεται διὰ τὸ ἐπὶ τῶν ὄρῶν τὸ ὕδωρ πλεονάζον βιαιότερον ἐκθλίβεσθαι, αὐγῆμῶν δὲ ὅντων ἀπολήγει ἡ ρύσις διὰ τὸ μὴ ἐπιφέρεσθαι πλέον ὕδωρ. αἱ μέντοι γενναῖαι πηγαὶ οὐ παρὰ πολὺ τὴν ἀνάβλυσιν ἵσχουσιν. δεῖ οὖν περιλαβόντα τὸ πᾶν τῆς πηγῆς ὕδωρ, ὥστε μηδαμόθεν ἀπορρεῖν, σωλῆνα τετράγωνον μοιλιοῦν ποιῆσαι, στοχασάμενον μᾶλλον μείζονα πολλῷ τῆς ἀποθύσεως· εἴτα δὲ ἐνὸς τόπου ἐναρμόσαι αὐτὸν ὥστε δὲ τὸν ἐν τῇ πηγῇ ὕδωρ ἀπορρεῖν. δεῖ δὲ αὐτὸν κεῖσθαι εἰς τὸν ταπεινότερον τῆς πηγῆς τόπον, ὥστε ἔχειν αὐτὴν ἀπόρρυσιν. τὸν δὲ ταπεινότερον ἐπιγνωσόμεθα τῆς πηγῆς τόπον διὰ τῆς διόπτρας. ἀπολήψεται οὖν τὸ ἀπορρέον διὰ τοῦ σωλῆνος ὕδωρ ἐν τῷ περιστομίῳ τοῦ σωλῆνος· οἷον ἀπολαμβάνει[ν] δακτύλους β· ἔχετω δὲ καὶ τὸ πλάτος τοῦ περιστομίου τοῦ σωλῆνος δακτύλους οἱ ἔξακις δύο γίνονται ιβ· <ἀποφανούμεθα δὴ τὴν ἀνάβλυσιν τῆς πηγῆς δακτύλων ιβ>. εἰδέναι δὲ χρὴ ὅτι οὐκ ἔστιν αὐταρκες πρὸς τὸ ἐπιγνῶναι, πόσον χορηγεῖ ὕδωρ ἡ πηγή, [ἢ] τὸ εὐρεῖν τὸν ὄγκον τοῦ ρέματος, ὃν λέγομεν εἶναι δακτύλων ιβ, ἀλλὰ καὶ τὸ τάχος αὐτοῦ· ταχυτέρας μὲν γὰρ οὖσης τῆς ρύσεως πλέον ἐπιχορηγεῖ τὸ ὕδωρ, βραδυτέρας δὲ μεῖον. διὸ δεῖ ὑπὸ τὴν πηγῆς ρύσιν ὄρυξαντα τάφρον τηρῆσαι ἐξ ἡλιακοῦ ὥροσκοπίου, ἐν τινὶ ὥρᾳ πόσον ἀπορρεῖ ὕδωρ ἐν τῇ τάφρῳ, καὶ οὕτως στοχάσασθαι τὸ ἐπιχορηγούμενον ὕδωρ ἐν τῇ ἡμέρᾳ πόσον ἐστίν, ὥστ' οὐδὲ ἀναγκαῖόν ἐστι τὸν ὄγκον τῆς ρύσεως τηρεῖν· διὰ γὰρ τοῦ χρόνου δήλη ἐστὶν ἡ χορηγία. (Ἡρων ο Άλεξανδρεύς, *Διόπτρα*, Schoenne, 1976)

[OT38] ἐν τῷ μέντοι τὰ ἀγγεῖα τὰ δοκοῦντα εἶναι τοῖς πολλοῖς κενὰ οὐκ ἐστιν, ὡς ὑπολαμβάνουσι, κενά, ἀέρος δὲ πλήρη. ὁ δὲ ἀήρ ἐστιν, ὡς τοῖς περὶ φύσεως πραγματευσαμένοις ἀρέσκει, ἐκ λεπτῶν καὶ μικρομερῶν σωμάτων συνεστηκάς ἀφανῶν ἡμῖν ὅντων ὡς ἐπὶ <τὸ> πολύ. ἐὰν γοῦν εἰς τὸ δοκοῦν ἀγγεῖον κενὸν ὑπάρχειν ἐγχέῃ τις ὕδωρ, καθ' ὅσον ἀν πλῆθος τοῦ ὕδατος εἰς τὸ ἀγγεῖον ἐμπίπτῃ, κατὰ τοσοῦτον πλῆθος ἀήρ ἐκχωρήσει. κατανοήσει δὲ ἂν τις τὸ λεγόμενον ἐκ τοῦ τοιούτου· ἐὰν γὰρ εἰς τὸ ὕδωρ καταστρέψας ἀγγεῖον τὸ δοκοῦν εἶναι κενὸν πιέζεις εἰς τὸ κάτω ἀκλινὲς διαφυλάσσων, οὐκ εἰσελεύσεται τὸ ὕδωρ εἰς αὐτό, καὶ ὅλον αὐτὸν κρύψῃ· ὥστε δῆλον εἶναι, ὅτι σῶμα ὑπάρχων ὁ ἀήρ οὐκ ἐξ παρεισελθεῖν τὸ ὕδωρ διὰ τὸ πεπληρωκέναι πάντα τὸν ἐν τῷ ἀγγείῳ τόπον. ἐὰν γοῦν τρυπήσῃ τις τὸν πυθμένα τοῦ ἀγγείου, τὸ μὲν ὕδωρ διὰ τοῦ στόματος εἰς αὐτὸ

εἰσελεύσεται, ὁ δὲ ἀήρ διὰ τοῦ τρυπήματος ἐξελεύσεται. [...] διὸ δὴ ὑποληπτέον εἶναι σῶμα τὸν ἀέρα. γίνεται δὲ πνεῦμα κινηθεῖς· οὐδὲν γὰρ ἔτερόν ἔστι τὸ πνεῦμα ἢ κινούμενος ἄήρ. εἰὰν γοῦν τετρυπημένου τοῦ ἀγγείου κατὰ τὸν πυθμένα καὶ εἰσπίπτοντος τοῦ ὅδατος παραθῆ τις τῷ τρυπήματι τὴν χεῖρα, αἰσθήσεται τὸ πνεῦμα ἐκπίπτον ἐκ τοῦ ἀγγείου. ("Ἡρων ο Ἀλεξανδρεὺς, Πνευματικὰ, Schmidt, 1899)

#### S4.6 Quotations from section “From antiquity to modern science”

[OT39]. Mais quand il y auroit de ces pays-là où il ne pleut jamais, cela n'empescheroit pas qu'il n'y coulast des Rivieres qui auroient leurs sources en d'autres pays où il pleut, comme fait le Nil qui coule en Egypte où il ne pleut point. [...]

Suite de l'opinion de l'Auteur

Apres avoir rejette l'Opinion Commune, après avoir fait voir que l'eau qui coule dans les Rivières pendant une année n'est pas si considérable que se l'est figuré Aristote & ceux qui l'ont suivy, & que les pluyes peuvent fournir des eaux suffisamment pour entretenir leur cours durant une année; il ne me reste plus qu'à faire voir comment les eaux de la pluye & de la neige tombées dans les Rivières, peuvent sortir par le haut des montagnes pour faire des sources. (Perrault, 1678, p. 207)

#### S4.7 Quotations from the Epilogue

[OT40]. Φιλοσοφίαν δὲ πρῶτος ὠνόμασε Πυθαγόρας καὶ ἑαυτὸν φιλόσοφον [...] μηδένα γὰρ εἶναι σοφὸν [ἄνθρωπον] ἀλλ' ἡ θεόν (Διογένης Λαέρτιος, *Bίοι καὶ γνῶμαι τῶν ἐν φιλοσοφίᾳ εὐδοκιμησάντων*, A.12).

[OT41]. φίλος μὲν Σωκράτης, ἀλλά φιλτάτη ἡ ἀλήθεια. (*Ἀμμώνιος, Αριστοτέλους βίος*) [Latin version: Amicus Socrates, sed magis amica veritas.]

[OT42]. δόξειε δ' ἂν ἵσως βέλτιον εἶναι καὶ δεῖν ἐπὶ σωτηρίᾳ γε τῆς ἀληθείας καὶ τὰ οἰκεῖα ἀναιρεῖν, ἄλλως τε καὶ φιλοσόφους ὄντας: ἀμφοῖν γὰρ ὄντοι φίλοιν ὅσιον προτιμᾶν τὴν ἀλήθειαν. (Αριστοτέλης, *Ηθικά Νικομάχεια*, 1096a11)

[OT43]. ὁ γὰρ πρῶτος σαφέστατόν τε πάντων καὶ θαρραλεώτατον περὶ σελήνης κατανγασμῶν καὶ σκιᾶς λόγον εἰς γραφὴν καταθέμενος Ἀναξαγόρας οὕτ' αὐτὸς ἦν παλαιὸς οὕτε ὁ λόγος ἔνδοξος, ἀλλ' ἀπόρρητος ἔτι καὶ δι' ὀλίγων καὶ μετ' εὐλαβείας τινὸς ἢ πίστεως βαδίζων. οὐ γὰρ ἡνείχοντο τοὺς φυσικοὺς καὶ μετεωρολέσχας τότε καλουμένους, ὡς εἰς αἰτίας ἀλόγους καὶ δυνάμεις ἀπρονοήτους καὶ κατηναγκασμένα πάθη διατρίβοντας τὸ θεῖον, ἀλλὰ καὶ Πρωταγόρας ἔφυγε, καὶ Ἀναξαγόραν εἰρχθέντα μόλις περιεποήσατο Περικλῆς, καὶ Σωκράτης, οὐδὲν αὐτῷ τῶν γε τοιούτων προσῆκον, ὅμως ἀπώλετο διὰ φιλοσοφίαν. (Πλούταρχον, *Bίοι Παράλληλοι, Νικίας*, 23)
