1. The evolution of flora in riverbed of Voudouros river

Figure S1. Study areas.

Figure S2. The evolution of the disease in plain trees in area 1 of Figure S1.

Figure S3. The evolution of the disease in plain trees in area 1 of Figure S1.

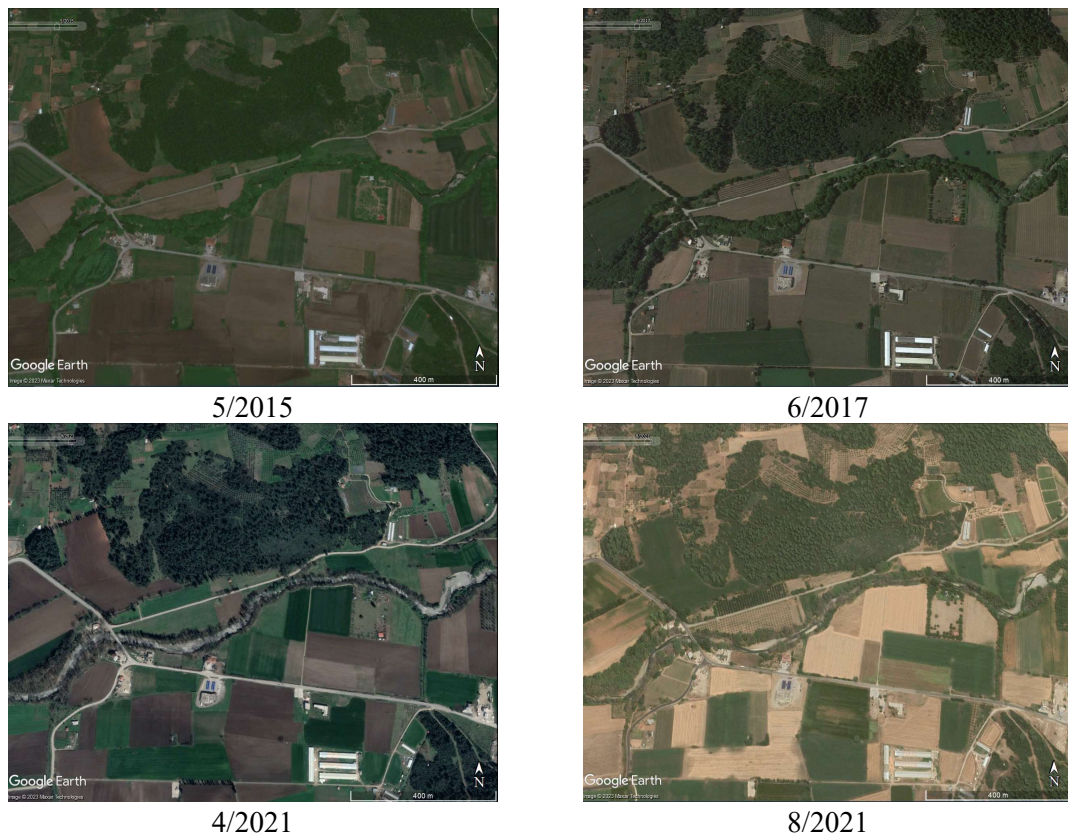

Figure S4. The evolution of the disease in plain trees in area 1 of Figure S1.

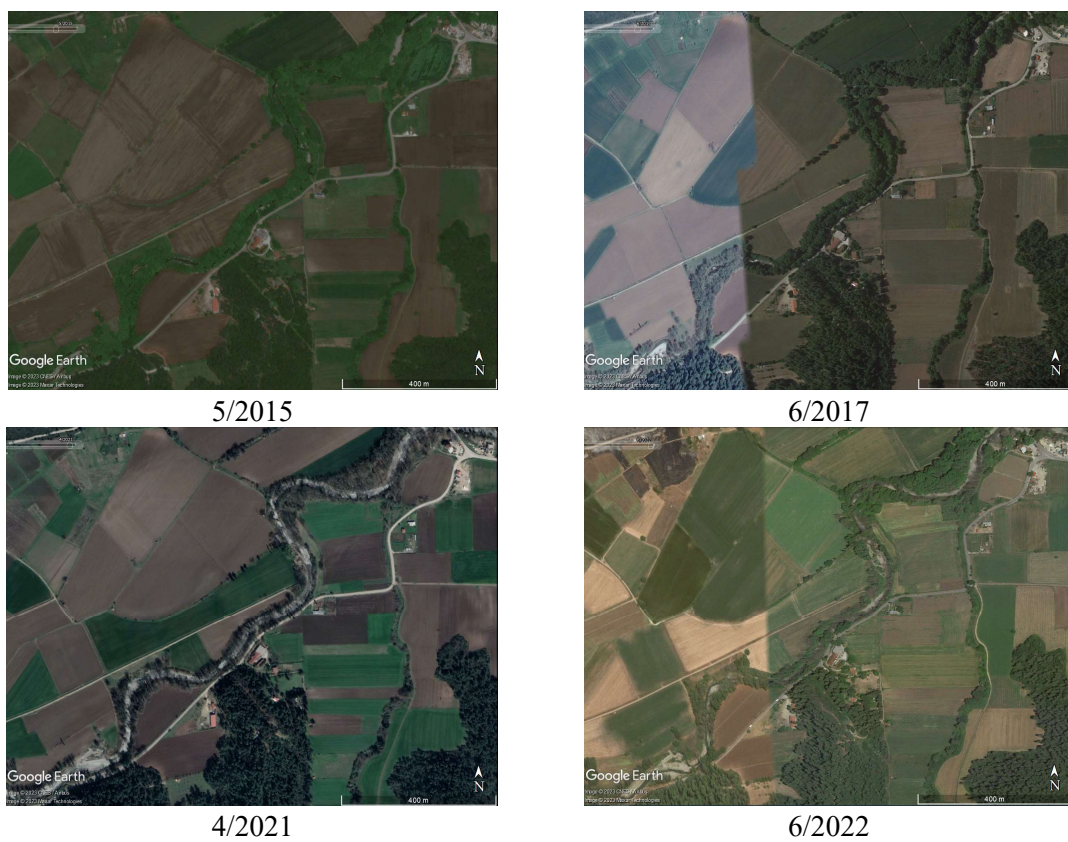

Figure S5. The evolution of the disease in plain trees in area 1 of Figure S1.

2. The riverbed before mid-2010s and in 2022 (Voudouros, Nileas and Kireas rivers)

Figure S6. The riverbed before mid-2010s and in 2022 in Voudouros, Nileas and Kireas rivers.

3. The river basin of Nileas river in August 2020 and in August 2021

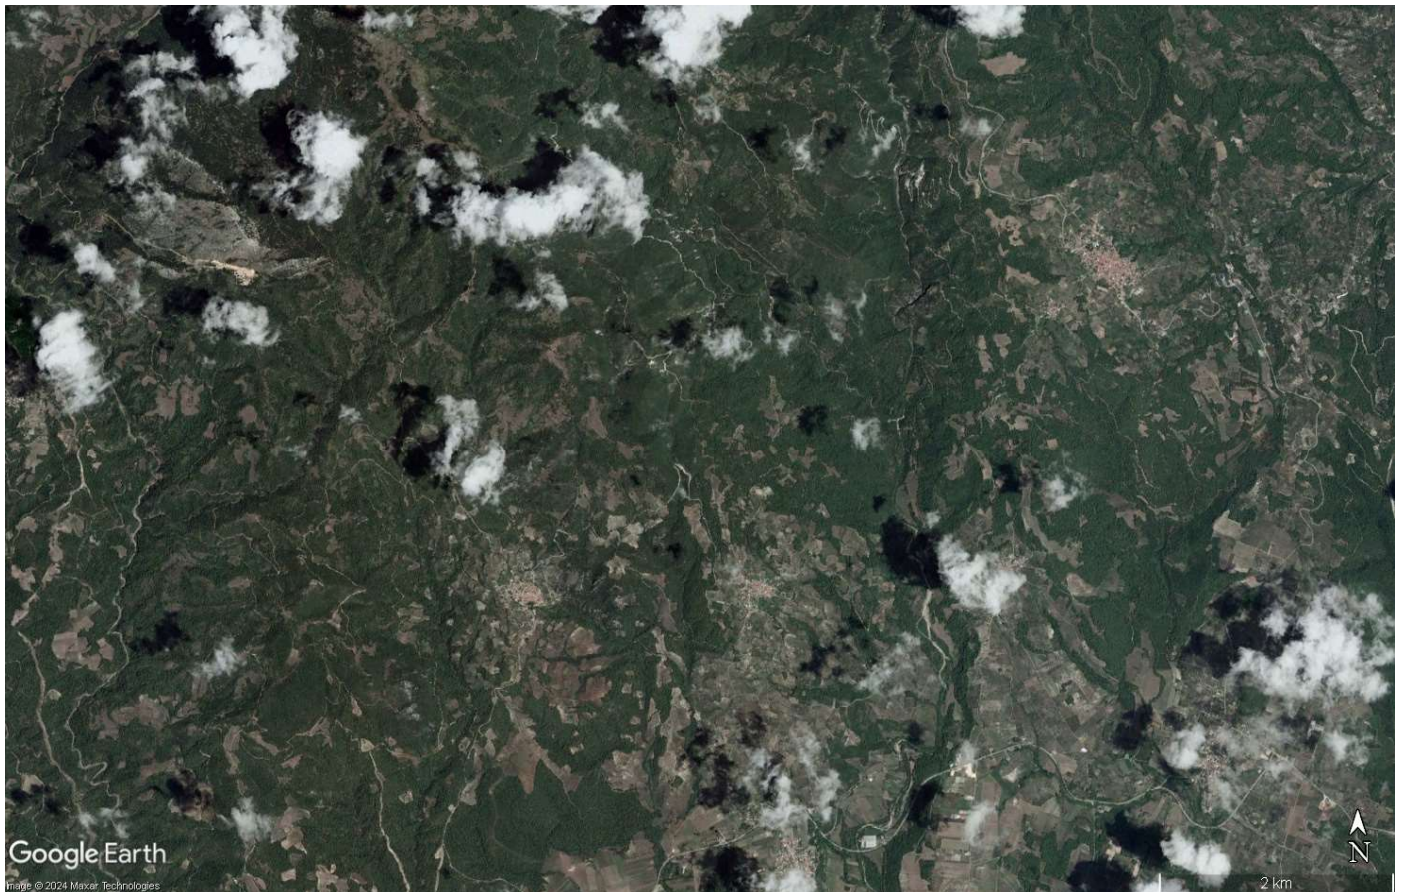

Figure S7. The riverbasin of Nileas river in August 2020 (before the wildfire) (Source: GoogleEarth).

Figure S8. The river basin of Nileas river in August 2021 (after the wildfire) (Source: GoogleEarth).

4. On-site Field Inspection Report

A total of 23 landmarks were taken, most of them along the river but also from the wider area of interest (Figure S9, S10). In Table 1 is a summary of points and their coordinates.

At each location, photographs were taken upstream and downstream of the river and details were noted of the problems observed due to the disease of plane trees and the burnt forest.

Positions A, B, C, D (Figure S11, Table S2) were added in the second phase of the on-site field inspection. They are mostly located downstream of the confluence of the rivers, along Voudouros river, where the greatest change in landscape was observed.

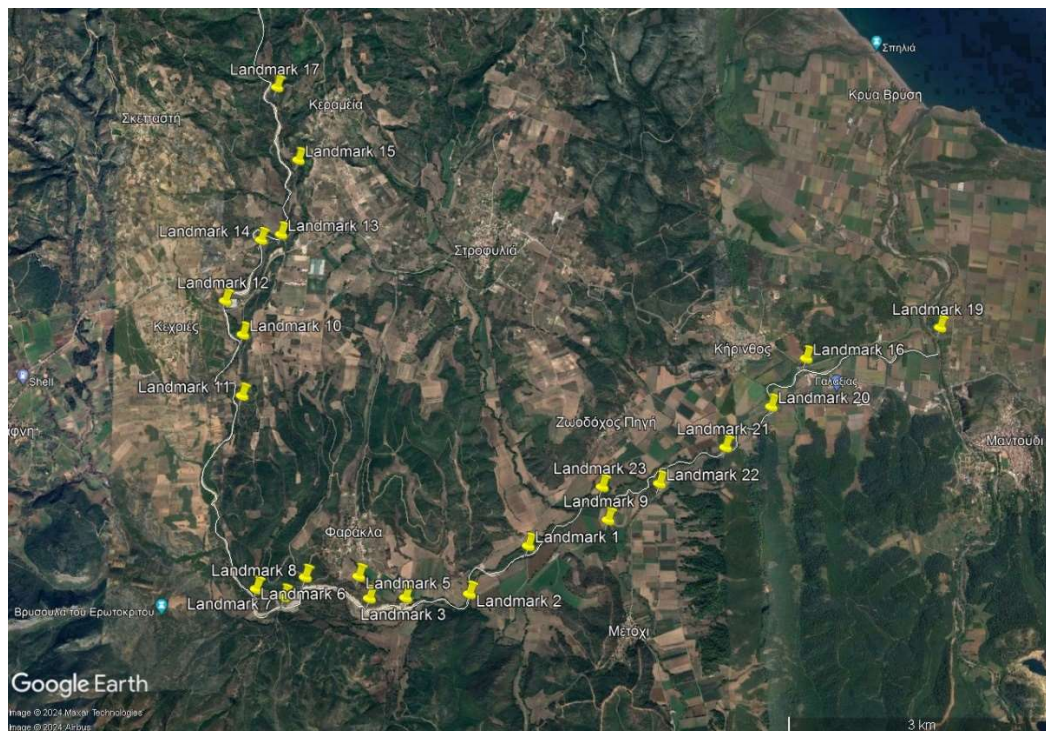

Figure S9. Nileas River-Branch of Interest (Source: GoogleEarth).

Figure S10. River elevation profile (Source: GoogleEarth).

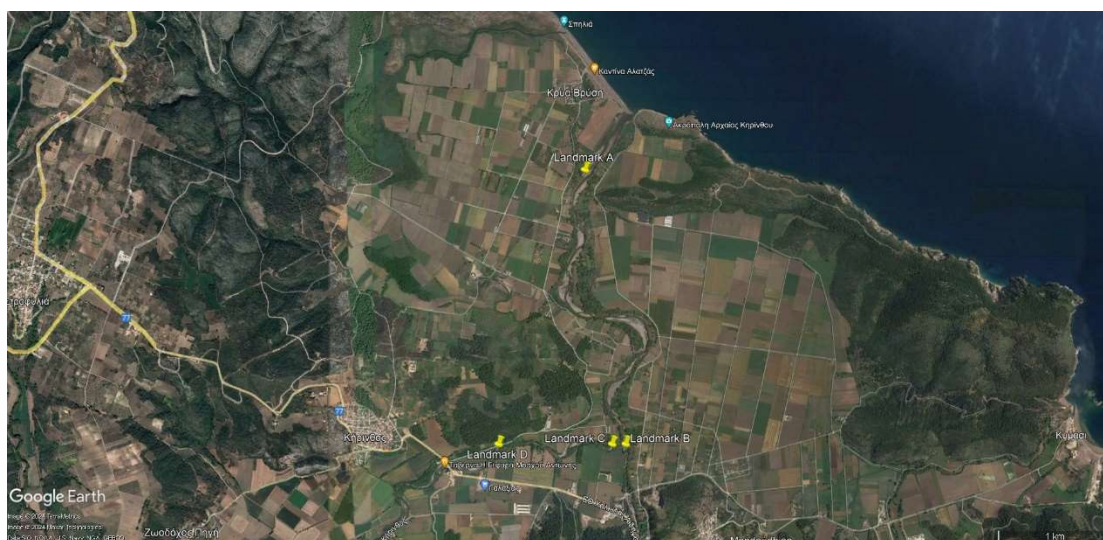

Figure S11. Additional Points (Source: GoogleEarth)

Table S1. Landmarks which present before and after Daniel and Elias storms
